

Catalonia Is the Globalist Prototype for Breaking Nations into Regions

written by GEG | October 24, 2017

The goal of the Soros-funded revolution in Catalonia is to break apart the nation of Spain into smaller political regions and city-states ruled by the EU and, above that, by the UN. Although the rhetoric is about independence, the reality is just the opposite. It is the implementation of Agenda 2030 which calls for a global government based on the totalitarian model of collectivism. -GEG
