

# The "Pharmaceutical CIA: How Sewage and Pollution Became "Treatable Diseases

written by GEG | December 21, 2017

According to Robert Kennedy Jr., waste from industrialized pig farms are kept in open-air pits called lagoons and is sold to farmers who spray "it on their crops as fertilizer. Hogs produce ten times the fecal waste by weight as humans, so a facility with 10,000 hogs produces as much waste as a city of 100,000 people.

Jon Rappoport says that the CDC has become a front for the pharmaceutical cartel and blames filth-related diseases on 'newly discovered viruses', and then invents toxic vaccines supposedly to combat the viruses. Industrialized pig farms should have their own sewage treatment plants, but the cost would be so high that pork would be priced out of the market. Instead, the price is paid, not in the cost of pork, but in the cost of ill health and premature death. -GEG

*"To handle all that [pig-farm feces] waste, farmers in North Carolina use a standard practice called the lagoon and spray field system. They flush feces and urine from barns into open-air pits called lagoons, which turn the color of Pepto-Bismol when pink-colored bacteria colonize the waste. To keep the lagoons from overflowing, farmers spray liquid manure on their fields nearby. The result, says Steve Wing, an epidemiologist at the University of North Carolina at Chapel Hill, is this: 'The eastern part of North Carolina is covered with shit'."* -National Geographic, 10/30/14

The above quote describes corporate pig farming around the world.

In order to carry out this operation, giant companies like Smithfield have influenced legislators and government-agency officials. Environmental laws and regulations are ignored, or changed. Lawsuits are fought, hammer and tongs.

Here is what Robert F Kennedy Jr. told radio interviewer, Rachel Lewis Hilburn on 6/3/16:

“...a hog produces ten times the amount of fecal waste by weight as a human being, so if you have a facility that has ten thousand hogs in it, it’s producing as much sewage as a city of a hundred thousand people. Smithfield has one plant in Utah—they call it Circle Four Farms—that has a million hogs on it, so it’s producing the same amount of waste as New York City every day.”

Here is Kennedy’s kicker:

“There’s no difference between hog waste and human waste in terms of its danger to human health. They [Smithfield and other giant corporate pig operations] ought to have to have a sewage treatment plant that cleans it up. And yet, if they had to build that sewage treatment plan, it would drive the price of hogs up so that they could no longer function in the marketplace...they ought to have to build sewage treatment facilities but nobody’s making them do that because they have used political clout...”

All right, that’s a bit of background. Now I’m going to shift to the subject of Swine [Pig] Flu, the phony epidemic of 2009.

Where did it start?

At a Smithfield pig-raising operation in Perote, Mexico; in a village called La Gloria. Smithfield raises 950,000 hogs a year there.

Press reports described outdoor “pig feces lagoons” on the property. When workers began to get sick, the area was sprayed with unknown chemicals. More workers fell ill and died.

Anyone with a basic knowledge of public health could testify that this combination of mind-boggling (non-) sanitation, plus strong germicides, plus other toxic chemicals routinely dumped in the feces lagoons, could and would cause human illness and death.

In fact, it doesn’t matter which particular germs are present in the mix.

People at the CDC had to be well aware of this. Yet, in 2009, their choice was to rush researchers to the Smithfield operation in La Gloria, Mexico, armed with the unfounded assumption that some novel virus, never before seen, was the culprit, and their job was to take blood samples and discover what the new germ was.

Why? Why assume, when workers who operate in that kind of environment get sick, there is some new disease at work? The symptoms of the workers were not unusual, given the circumstances.

Workers dying in that vat of filth and chemical soup should be expected.

But, up front, based on no evidence, the CDC on-site team was going for a new germ and a new disease, and that’s what they announced they had found. A gullible world, fed by press reports, bought in.

And that's how the fake epidemic called Swine Flu was launched.

All the focus that could have centered on the highly toxic Smithfield pig operation in La Gloria was diverted.

Diverted to a virus.

H1N1 it was called. The Swine Flu virus.

Suddenly, it was a medical problem. Not an environmental disaster.

It was RE-INVENTED as a medical problem.

If you don't yet get what I'm pointing out here, imagine this: you're living in an old sewage tunnel under a city. You're surrounded by human excrement and biting insects and fetid waste water and foul air—and when you fall ill, you suddenly see virus-hunting researchers, not haz-mat rescue workers, approach you and take blood samples. Are they crazy?

No, they're just doing what their bosses tell them to do. Your illness has to be shifted over to a "new disease and a new virus."

This is how the game works.

This is the medical hoax.

In the case of Swine Flu, it gets worse. It turns out that the virus is not so prevalent after all. That is why, in the early autumn of 2009, CBS reporter Sharyl Attkisson discovered that the CDC, ignoring its mandate and charter, had secretly stopped counting Swine Flu cases in America. You see, the overwhelming percentage of blood samples taken from the most likely Swine Flu patients, when sent to labs for testing, were coming back with no trace of the so-called Swine Flu virus or any other flu virus. CBS put Attkisson's published report on the shelf and never followed up on it.

Again, the virus as the cause of illness, was the cover story. Intelligence agencies float cover stories on a regular basis. It's no accident that CDC has a large unit of virus hunters called the Epidemic Intelligence Service.

Right off the top, I can tell you they create disinformation on a scale that must make the CIA jealous.
