

The Hidden Purpose Behind 5G Wireless Network

Journalist Jon Rappaport explains the hidden agenda of the 5G Wireless Network, which is being sold to the public as a way to improve communications and save electricity. Globalists plan to bring 100-billion of these NEW devices online, all connected to the Internet and the Cloud. The goal of 5G Wireless is to network with electrical devices in every home and business to monitor track activities by monitoring energy-use patterns. The data will be used by an Energy Authority to issue directives and fines whenever you do something that is unauthorized. Projects using words like smart grid, smart meters, sustainability, Agenda 21, and smart cities are carefully designed to mask the real purpose, which is to control everyone through allocation of energy. And, oh, yes, the radiation is unhealthy and operation of such a control grid is outrageously expensive. -GEG

I keep hammering on this 5G issue, because it contains the blueprint of a future only elite madmen want.

For the rest of us, it's a catastrophe in the making.

[I've covered the extreme health dangers of 5G in another article.](#) Here, I want to flesh out the hidden agenda.

[A few decades ago](#), a movement was started to create an interconnected power grid for the whole planet. We were told this would be the only way to avoid wasting huge amounts of electricity and, voila, bring all nations and all people into

a modern 21st century.

But now, it's a different story, a classic bait and switch. The bait was the promise of One Grid for all. The switch is what 5G will bring us:

100 billion or more NEW devices online, all connected to the Internet and the Cloud. What could be more wasteful? What could be more ridiculous? This is the opposite of sane energy use.

Who really cares whether his 5G-connected refrigerator keeps track of the food items inside it and orders new items when the supply dwindles? Who has to have a 5G driverless car that takes him to work? Who must have a 5G stove that senses what is being cooked and sets the temperature for four minutes? Who lives and who dies if a washing machine doesn't measure how much soap is stored inside and doesn't order new soap? Who is demanding a hundred devices in his home that spy on him and record his actions?

With 5G, the ultimate goal is: every device in every home that uses energy will be "its own computer," and the planetary grid will connect ALL these devices to a monitoring and regulating Energy Authority.

As Patrick Wood details in his classic, [*Technocracy Rising*](#), that worldwide Energy Authority was the dream of the men who launched the Technocracy movement, in America, in the 1930s.

They set out the key requirements—which weren't technically possible then, but are quite doable now: continuous real-time measuring of both energy production and energy use from one end of the planet to the other...

So that both energy production and energy consumption could be controlled. "For the good of all," of course.

5G is the technology for making this happen.

“We’re promising a stunning long-range future of ‘automatic homes’, where everything is done for you. But really, that’s the cover story. Ultimately, we want to be able to measure every unit of energy used by every device in every home—and through AI, regulate how much energy we will let every individual consume, moment to moment. We control energy. We are the energy masters. If you want to run and operate and dominate the world, you control its energy.”

Terms and projects like smart grid, smart meters, sustainability, Agenda 21, smart cities, climate change—all this is Technocratic planning and justification for Rule through Energy.

The beginning of an actual rational plan for energy would start this way: DUMP 5G. Dump the whole plan of installing small transmitter-cells on buildings and homes and trees and lampposts and fences all over the planet. Forget it. Don’t bring 100 billion new devices online. Aside from the extreme health dangers, it’s ridiculously expensive. It’s on the order of saying we need thousand-foot robots standing on sidewalks washing the windows of office buildings.

If some movie star wants to install 30 generators on his property and have engineers build him an automatic home, where he can sit back, flip a switch, and have three androids carry him into his bathtub and wash him and dry him, fine. But planning a smart city? Who voted for that? Who gave informed consent? Nobody.

A global Energy Authority, of course, is going to decide that a small African country needs to be given much more energy, while Germany or France or the US will have to sacrifice energy for the cause of social justice. But this is yet another con, because you won’t see government cleaning up the contaminated water supplies of that small African country, or installing modern sanitation, or curtailing the forced movement of populations into poverty-stricken cities, or

reclaiming vast farm land stolen by mega-corporations and giving that land back to local farmers.

The whole hidden purpose of an Energy Authority is control.

And because the Authority is Globalist and Technocratic, it aims to lower energy use in industrial nations and help wreck their economies, making it much easier to move in and take over those countries.
