

# Autism Symptoms in Pets Rise as Pet Vaccination Rates Rise

Pets, especially dogs, have been exhibiting signs of autism, similar to those found in children, and studies are underway to evaluate the possibility that animals can become autistic. Nicholas Dodman, DVM, was looking for a genetic cause of obsessive tail chasing in bull terriers that often results in self-maiming, but instead he discovered numerous symptoms of autism in the dogs. He also found that two biomarkers common to children with autism were also present in the affected dogs. Adverse reactions to vaccination are not uncommon in pets. Globally, the animal vaccine industry has been valued at \$6.27 billion in 2015 and is expected to rise to \$11.40 billion by 2024.

Just as the incidence of Autism-Spectrum Disorders (ASDs) has risen alarmingly in children over the last half century, there is evidence that similar behavioral disorders have been observed in pets, most widely reported among pet dogs. It is too early for mainstream veterinary authorities to confidently confirm that dogs can develop autism, but there are numerous reports of behavior patterns in pets that mirror autism behavior in children. Studies are underway to evaluate the possibility that animals can become autistic. [1]

Though the appearance of autism-like behaviors has been observed in dogs since the mid-1960s, the first researcher to specifically relate some of those behaviors to autism was Nicholas Dodman, DVM, who initially set out in 2011 to look for a genetic cause of obsessive tail chasing in bull terriers. This behavioral characteristic has been observed in as many as 85 percent of a bull terrier litter and often results in self-maiming.

Presenting the evidence from his study at the 2015 American College of Veterinary Behaviorists, Dr. Dodman reported an autism-like condition, noting that “the vast majority of affected dogs were males, and many had other strange behaviors or physical conditions that accompanied the tail chasing, such as explosive aggression, partial seizures, phobias, skin conditions, gastrointestinal issues, object fixation and a tendency to shy away from people and other dogs.” [2] He and his associates were further able to establish that two biomarkers common to children with autism were also present in the affected dogs. [3]

Referencing diagnostic criteria from the American Academy of Pediatrics, some of the most commonly recognized features of

autism spectrum disorders (ASDs) in children include challenges associated with social interactions and communication, and “restrictive and repetitive interests and activities;” [4] boys are five times more likely than girls to have ASDs; and autism in humans also is frequently associated with aggression, gastrointestinal and skin disorders, and object fixation. [5, 6]

Solid research is lacking in the field of canine autism, but a collaborative study called “Canines, Kids, and Autism: Decoding Obsessive Behaviors in Canines and Autism in Children” is currently underway in hopes of shedding light on the condition as it occurs in children and pets. [7] Funded by The American Humane Association, researchers from the Translational Genomics Research Institute (TGen), Southwest Autism Research & Resource Center, Tufts University Cummings School of Veterinary Medicine, and the University of Massachusetts Medical School are hoping to develop a genetic test for autism that will benefit both humans and animals. [8]

## **“Canine Dysfunctional Behavior” May Be Autism**

Though most animal behaviorists still prefer to categorize

animals  
with these traits as having “canine dysfunctional behavior”  
rather than  
“autism,” [9] those who concede the condition may in fact be  
autism  
describe the condition as both “idiopathic,” meaning the cause  
is  
unknown, and congenital,” meaning the puppies are born with  
autism  
behaviors rather than developing autism sometime after  
birth. Theorizing  
that the syndrome may be caused by a “lack of mirroring  
neurons in the  
brain,” studies also suggest that autism may appear in puppies  
as a  
result of parental exposure to toxins or unnecessary vaccines.

**Funding for Alexandria**

# Ocasio-Cortez' Green New Deal Is Has Links to George Soros and the Rockefellers

The Green New Deal (GND) proclamation was crafted over a December weekend by Alexandria Ocasio-Cortez along with three groups: the Sunrise Movement, a grassroots climate organization; the Justice Democrats, which recruits and supports progressive candidates; and a policy shop called the New Consensus. The Sunrise Movement, the chief lobbyists of the GND to the Democratic Party, has an "army of young people" seeking to "make climate change an urgent priority across America." Sunrise has a complex web of donors that include the Rockefeller Family Fund and other non-profit partners including the Center for Popular Democracy, the the Sierra Club, Greenpeace and many more organizations that are financed by billionaire George Soros.

**The Green New Deal blueprint introduced by Rep. Alexandria**

**Ocasio-Cortez was crafted by three far-left organizations and is being pushed by a coalition of well-funded professional progressive groups and known leftist agitators.**

Some of the organizations helping to promote the Green New Deal have ties to financing from billionaire George Soros and trace their roots to such radical groups as Occupy Wall Street and Black Lives Matter.

Earlier this month, Ocasio-Cortez posted an 11-page Google document in the form of a nonbinding legislative resolution that has become the most authoritative [version](#) of the Green New Deal, a broad outline for the current conception of the socialist-style plan.

Ocasio-Cortez's Green New Deal resolution, introduced along with Sen.

Ed Markey (D-MA), has already been endorsed by more than 45 Democratic

representatives. The deal received high-profile endorsements from

Senators Elizabeth Warren, Cory Booker and Bernie Sanders.

The Green New Deal seeks, as the *New Yorker* [recently](#) put it, "nothing less than a total overhaul of our national infrastructure."

The utopian deal demands 100 percent of all buildings in the U.S.

convert to clean energy, calls for the removal of all greenhouse gases

from the entire atmosphere, and includes such non-"green" clauses as a

federal jobs guarantee while protecting the right of all workers to

organize and unionize.

It also pledges "affordable, safe and adequate housing" for "all people of the United States."

The wealth-spreading deal aims to "virtually eliminate poverty

in the  
United States and to make prosperity, wealth and economic  
security  
available to everyone participating in the transformation.”

Radical groups, Soros ties

The Green New Deal was crafted by Ocasio-Cortez along with  
three  
groups – the Sunrise Movement, Justice Democrats and a group  
calling  
itself New Consensus.

*The New Yorker* [reported](#):

*The document was written over a single December weekend  
by the staff of the freshman representative Alexandria  
Ocasio-Cortez and  
three like-minded progressive groups, none of which existed  
two years  
ago: the Sunrise Movement, a grassroots climate organization;  
the  
Justice Democrats, which recruits and supports progressive  
candidates;  
and an upstart policy shop called the New Consensus.*

Besides helping to write the deal text, the Sunrise Movement  
has been  
the central progressive organization lobbying the Democratic  
Party to  
implement the Green New Deal.

Sunrise [markets](#)

itself as an “army of young people” seeking to “make climate change an urgent priority across America, end the corrupting influence of fossil fuel executives on our politics, and elect leaders who stand up for the health and wellbeing of all people.”

## **California and 15 Other States Are Suing Trump Over His Border Wall Emergency Declaration**

Sixteen states, led by California, sued President Trump over his declaration of a national emergency and his plans to redirect federal funds to the construction of a border wall. The other states include Colorado, Connecticut, Delaware, Hawaii, Illinois, Maine, Maryland, Michigan, Minnesota,

Nevada, New Jersey, New Mexico, New York, Oregon and Virginia, all of which have Democratic attorneys general and all but one of which are led by Democratic governors. The lawsuit claims that Trump manufactured a “crisis” in order to obtain funding for a wall, and that there is no national emergency at the southern border. The complaint also alleges that a wall will cause environmental damage. Trump expects to lose the legal challenge in California and in the liberal Ninth Circuit, but to later prevail at the Supreme Court, where conservatives hold a 5-4 majority.

**The State of California and fifteen other states sued President Donald Trump on Monday over his declaration Friday of a national emergency and his plans to redirect federal funds to the construction of a wall on the southern border.**

The lawsuit, [as expected](#), was filed by California Attorney General Xavier Becerra, and was joined by attorneys general from “Colorado, Connecticut, Delaware, Hawaii, Illinois, Maine, Maryland, Michigan, Minnesota, Nevada, New Jersey, New Mexico, New York, Oregon and Virginia – all of which have Democratic attorneys general and all but one of which are led by Democratic governors,” the *Wall Street Journal* [noted](#) Monday.

However, ten of the 26 Democrat attorneys general have not

joined the lawsuit – at least not yet, as of Tuesday.

The [complaint](#), filed in federal court in the Northern District of California, decries what it calls “President Donald J. Trump’s flagrant disregard of fundamental separation of powers principles engrained in the United States Constitution.” It adds:

*Contrary to the will of Congress, the President has used the pretext of a manufactured “crisis” of unlawful immigration to declare a national emergency and redirect federal dollars appropriated for drug interdiction, military construction, and law enforcement initiatives toward building a wall on the United States-Mexico border. This includes the diversion of funding that each of the Plaintiff States receive.*

The complaint continues through several familiar talking points from the Democratic Party:

*The federal government’s own data prove there is no national emergency at the southern border that warrants construction of a wall. Customs and Border Protection (“CBP”) data show that unlawful*

*entries are near 45-year lows. The State Department recognizes there is a lack of credible evidence that terrorists are using the southern border to enter the United States. Federal data confirm that immigrants are less likely to commit crimes than are native-born Americans. CBP data demonstrate that dangerous drugs are much more likely to be smuggled through, not between, official ports of entry—rendering a border wall ineffectual at preventing their entry into this country.*

Later in the complaint, the states claim that the border wall is not only unnecessary, but that it will also cause environmental damage. The complaint also claims a border barrier will not block “drug smuggling corridors.”

# Mexican Scientist Develops Cure for Human Papilloma Virus. Bankers Admit There's No Money in Curing People

Mexico: Researcher Dr. Eva Ramón Gallegos has found a cure for Human Papilloma Virus (HPV) using photodynamic therapy, a treatment that uses photosensitizing drugs along with light to kill cancer cells and pathogenic cells. HPV, the main cause behind cervical cancer, is reported to be the second leading cause of death among Mexican women. Dr. Gallegos' photodynamic therapy to eradicate HPV is a financial threat to Merck, the pharmaceutical giant that manufactures the Gardasil vaccine. In 2018, Merck made \$3.15 billion from its Gardasil vaccine for HPV, and they are now offering it in China, so profits are set to skyrocket.

Last year, an article by Goldman Sachs in a biotech research report considered whether curing patients was a sustainable business model. The investment firm prioritized the stability of the franchise over people's health and strategized which illnesses would be the most lucrative to treat.

## [News sources](#)

from Mexico are reporting that a researcher from National Polytechnic Institute has developed a cure for the Human Papilloma Virus (HPV).

Using [photodynamic therapy](#),

Dr. Eva Ramón Gallegos has been able to completely eradicate HPV in 29 patients. She has studied the effects of photodynamic therapy for 20 years, and has reportedly treated 420 patients with the therapy.

As a non-invasive procedure, it is said to be an effective method to prevent malignant neoplasm, which is the second leading cause of death among Mexican women.

Dr. Gallegos also [explained that](#):

*besides eradicating HPV, the main cause behind cervical cancer, photodynamic therapy is also used to eliminate premalignant lesions of cervical cancer in its first stages.*

The results of her work show that she was able to eradicate HPV in 100% of the patients who had the virus but had no premalignant lesions, 64.3% in women with HPV and lesions, and 57.2% in women who had lesions but don't have HPV. ([Source](#))

**Good News for HPV Sufferers – Bad News for Merck**

## and the Gardasil Vaccine

While this is good news for those suffering from HPV, the chances that this therapy will become available in the U.S. are slim to none. More than likely, this will become another therapy that is effective in treatment, but banned by the FDA.

The FDA, funded in great part by licensing fees from pharmaceutical companies, does not have a good track record in allowing any kind of natural cures that threaten pharmaceutical products, particularly natural cancer cures.

If anything, this discovery may increase the amount of "medical tourism" to Mexico, where many people flock to receive non-FDA approved treatments every year, especially for cancer.

Dr. Gallegos and her photodynamic therapy to eradicate HPV will, of course, become a huge financial threat to Merck, the pharmaceutical giant that manufactures the Gardasil vaccine, the world's #1 HPV vaccine.
