

# **“Mass Sterilization”: Kenyan Doctors Find Anti-fertility Agent in UN Tetanus Vaccine**

The Kenya Catholic Doctors Association is charging UNICEF and WHO with sterilizing millions of girls and women under cover of an anti-tetanus vaccination program that was designed to control the population of Africans, under cover of an anti-tetanus vaccination program sponsored by the Kenyan government. UNICEF and WHO use local disasters to mass vaccinate people, mainly children and young women. All of the samples that were tested returned positive for the HCG antigen, which is used to curb fertility. The Kenya Catholic Doctors Association said, “This proved right our worst fears; that this WHO campaign is not about eradicating neonatal tetanus but a well-coordinated forceful population control mass sterilization exercise using a proven fertility regulating vaccine. This evidence was presented to the Ministry of Health before the third round of immunization but was ignored.”

According to [LifeSiteNews](#), a Catholic publication, the Kenya Catholic Doctors Association is charging UNICEF and WHO with sterilizing millions of girls and women under cover of an anti-tetanus vaccination program sponsored

by the  
Kenyan government.

The Kenyan government denies there is anything wrong with the vaccine, and says it is perfectly safe.

The Kenya Catholic Doctors Association, however, saw evidence to the contrary, and had six different samples of the tetanus vaccine from various locations around Kenya sent to an independent laboratory in South Africa for testing.

The results confirmed their worst fears: all six samples tested positive for the HCG antigen. The [HCG antigen is used in anti-fertility vaccines](#), but was found present in tetanus vaccines targeted to young girls and women of childbearing age. Dr. Ngare, spokesman for the Kenya Catholic Doctors Association, stated in a bulletin released November 4:

*“This proved right our worst fears; that this WHO campaign is not about eradicating neonatal tetanus but a well-coordinated forceful population control mass sterilization exercise using a proven fertility regulating vaccine. This evidence was presented to the Ministry of Health before the third round of immunization but was ignored.”* ([Source.](#))

Dr. Ngare brought up several points about the mass tetanus vaccination program in Kenya that caused the Catholic doctors to become suspicious:

*Dr. Ngare told LifeSiteNews that several things alerted doctors in the Church's far-flung medical system of 54 hospitals, 83 health centres, and 17 medical and nursing schools to the possibility the anti-tetanus campaign was secretly an anti-fertility campaign.*

*Why, they ask does it involve an unprecedented five shots (or "jabs" as they are known, in Kenya) over more than two years and why is it applied only to women of childbearing years, and why is it being conducted without the usual fanfare of government publicity?*

*"Usually we give a series three shots over two to three years, we give it anyone who comes into the clinic with an open wound, men, women or children." said Dr. Ngare.*

*But it is the five vaccination regime that is most alarming. "The only time tetanus vaccine has been given in five doses is when it is used as a carrier in fertility regulating vaccines laced with the pregnancy hormone, Human Chorionic Gonadotropin (HCG) developed by WHO in 1992." ([Source.](#))*

# UNICEF: A History of Taking Advantage of Disasters to Mass Vaccinate

It should be noted that UNICEF and WHO distribute these vaccines for free, and that there are financial incentives for the Kenyan government to participate in these programs. When funds from the UN are not enough to purchase yearly allotments of vaccines, an organization started and funded by the Bill and Melinda Gates Foundation, GAVI, provides extra funding for many of these vaccination programs in poor countries. (See: [Bill & Melinda Gates Foundation Vaccine Empire on Trial in India.](#))

Also, there was no outbreak of tetanus in Kenya, only the perceived “threat” of tetanus due to local flood conditions.

These local disasters are a common reason UNICEF goes into poorer countries with free vaccines to begin mass vaccination programs.

## **20,000 Children Are Homeless in Oregon – Charity Converts Old School Buses into Functioning Homes to Help**

Julie Akins, the founder of Forever Homes, Vehicles for Changes, said that 20,000 Oregon children are homeless. She is renovating retired buses into fully functioning houses on wheels for families in need. The buses are mobile, have solar power, 50-gallon water tanks, full kitchens and a shower in the bathroom. The converted homes can last as long as 30 years and cost about \$25,000.

Medford, Ore. – A local non-profit is working to end homelessness one school bus at a time. 'Forever Homes, Vehicles for Change' is renovating retired buses into fully functioning houses on wheels.

"Every time I think about the bus, I just start smiling," Founder and local homeless advocate Julie Akins said. "I just started

trying to  
think of ways that I could help get kids under a roof, and  
honestly I  
had a dream about a bus, and I woke up the next day, and  
started  
researching, what I learned later is called a skoolie.”

The skoolie the group is working on is their first. Once  
renovated,  
the buses will have water tanks, solar power, a kitchen,  
bathroom,  
bedrooms and a living space.

“It’s an idea that’s just catching on like wildfire,” Leo  
Gorcey,  
Director of Development said. “Buses can go anywhere from 20  
to 30  
years, so you’ve got buses that are being retired at 12 years  
who have  
all these years of life left on them.”

To move in, applicants will need a driver’s license, a job,  
and a  
child. The group is focusing its efforts on housing homeless  
children  
and their families. Gorcey noted compared to a typical family  
home, it’s  
much more cost effective.

“You can convert the bus into a really nice living space for  
about \$15- to \$18,000.”

For a dollar lease per month, plus rent for an RV park, struggling families can save for a different home. They will also have the option to buy the bus they're in with \$200 monthly payments. While the process is long and laborious, Akins said the work will more than payoff.

"Whatever it takes to get kids under a roof and get a home cooked meal, and have the kind of childhood that all of us want kids to have, the kind of childhood we had," Akins said. "There's no reason not to provide that."

# Trans Woman Smashes Four World Records and Wins Nine Events in Women's Weightlifting Contest

Mary Gregory, a biological male who is transitioning to female, smashed four women's weightlifting records and won nine out of nine events at a single tournament. Last week, two other trans athletes won first and second place at the Connecticut state girls indoor track championships. Biological males have higher bone density, larger muscles, and higher testosterone levels than their biological female opponents. - GEG

It's the end of women's sports as we know it.

For the [second year in a row](#), transgender wrestler Mack Beggs won the Texas girls' Class 6A 110-pound wrestling division. Beggs is [in the process of transitioning](#) from female to male and taking testosterone. Mack won the title last year too.

In October 2018 transgender Dr. Rachel McKinnon (in the middle) became the [first ever transgender world champion](#) in a womens cycling event.

In March 2017, Laurel Hubbard, a 39 year-old transgender who was born male, [won her first international women's weightlifting title](#) in Australia breaking four national

records in the process.

Last week two trans athletes [won 1st and 2nd place](#) at the Connecticut state indoor track championships.

And this week a trans woman shattered four women's records in one day and won nine out of ten events at a single tournament.

**Colorado: Mainstream Media Ignores Story of Man Arrested on Charges of Attempted Murder of Two White Boys as**

# Possible Hate Crime

Aurora, Colorado: Mainstream media has been quiet about a hit-and-run vehicle attack against two white boys, ages 11 and 12, who were walking on the sidewalk when they were struck. Oghaleoghene Atuno was arrested on suspicion of using his vehicle for attempted murder, because security footage from the area showed him circling the cul-de-sac several times near a middle school before hitting the boys. Critics are questioning why the media is silent about this story and why police are not investigated it as a hate crime. -GEG

Have you heard the news report about a 21-year-old African-American male, Oghaleoghene Atuno, who targeted two white children with his vehicle? Unless you're watching brief clips on local Denver news, you probably haven't.

Atuno has been charged with attempted murder and child abuse while his alleged victims have been hospitalized after the brutal attack. Surveillance video shows him circling a cul-de-sac several times near Falcon Middle School in Aurora, Colorado, before driving his vehicle onto the sidewalk to strike the two children, age 11 and 12. One of the young boys, Josh Piazza, is still in the hospital with a fractured skull.

The circumstantial evidence seems to point to this being a textbook example of a hate crime. Atuno appeared to be circling the cul-de-sac near a school searching for a victim. When he spotted two Caucasian children, he drove his vehicle towards them onto the sidewalk. After hitting them, he drove off immediately. He claims he didn't know the victims and his reason for fleeing the scene immediately was because he was scared, according to police.

Attempted murder against children he didn't know after circling a cul-de-sac several times near a middle school – the math seems to add up to only a few possible conclusions and hate crime would be the most obvious. Yet this isn't getting any attention from the media and prosecutors have thus far declined to use the “hate crime” tag for enhanced sentencing should he be found guilty.

# US: 220,300 Public School Teachers Physically Attacked by Students in One Year

A record 220,300 public school teachers reported that they were physically attacked by a student during the 2015-2016 school year. 84% of those attacked were female. 80% were committed by students in elementary school. -GEG

A record 220,300 public school teachers reported that they were physically attacked by a student during the 2015-2016 school year, [according to a report jointly published this month by the National Center for Education Statistics and the Bureau of Justice Statistics.](#)

The 220,300 public school teachers who said they were physically attacked by a student in 2015-2016 is up from the 197,400 who said they were attacked by a student in 2011-2012 (which is the last school year before 2015-2016 for which teachers were surveyed on the question).

In 1993-94, the first year that public school teachers were surveyed on the question, 112,400 said they were physically attacked by a student.

The 220,300 public school teachers who said they were physically attacked by a student in 2015-16 equaled approximately 5.8 percent of the 3,827,100 public school teachers [the NCES estimates](#) there were during that year.

The NCES also estimated that the 197,400 teachers who reported being physically attacked by a student in 2011-12 also equaled 5.8 percent of the total public school teachers working that year.

Prior to that, in the years going back to the 1993-94 survey, the highest percentage of public school teachers who reported they had been physically attacked by a student was 4.4 percent in 1993-94.

# Severe Health Risks of 5G Have Been Covered Up

The greatest health hazards of cellphone use are related to the effects on bio chemistry, immune-system response, and DNA replication in humans. Nevertheless, current safety guidelines for the massive roll out of 5G are based on a 1996 study of the extent to which a cell phone heated the head of plastic mannequin. The public has never before been exposed to the ultra-high electromagnetic frequencies as are used in 5G technology. Over 2,000 international studies show that this type of radiation causes cancer, DNA damage, reduces fertility, and damages neurons in the brain and throughout the body. -GEG

In recent months there's been a lot of talk about 5G – the next generation of wireless technology. 5G is being touted as a necessary step to the 'internet of things' – a world in which our refrigerators alert us when we're low on milk, our baby's diapers tell us when they need to be changed, and Netflix is available everywhere, all the time.

But what we're not hearing is that evidence-based studies worldwide have clearly established the harmful effects of human exposure to pulsed radiofrequency radiation from cell towers, cell

phones and other devices – and that 5G will make the problem exponentially worse.

Most people believe that the Federal Communications Commission (FCC) carefully assesses the health risks of these technologies before approving them. But in testimony taken by Senator Blumenthal of Connecticut, the [FCC admitted it has not conducted any safety studies on 5G.](#)

Telecom lobbyists assure us that guidelines already in place are adequate to protect the public. Those safety guidelines, however, are based on a 1996 study of how much a cell phone heated the head of an adult-sized plastic mannequin. This is problematic, for at least three reasons:

*+ living organisms consist of highly complex and interdependent cells and tissue, not plastic.*

*+ those being exposed to radiofrequency radiation include fetuses, children, plants, and wildlife – not just adult male humans.*

*+ the frequencies used in the mannequin study were far lower than the exposures associated with 5G.*

5G radiofrequency (RF) radiation uses a 'cocktail' of three types of radiation, ranging from relatively low-energy radio waves, microwave radiation with far more energy, and millimeter waves with vastly more energy (see below). The extremely high frequencies in 5G are where the biggest danger lies. While 4G frequencies go as high as 6 GHz, 5G exposes biological life to pulsed signals in the 30 GHz to 100 GHz range. The general public has never before been exposed to such high frequencies for long periods of time.

This is a big deal. It turns out that our eyes and our sweat ducts act as antennas for absorption of the higher-frequency 5G waves. And because the distances these high-energy waves can travel is relatively short, transmitters will be required closer to homes and schools than earlier wireless technologies: the build-out will add the equivalent of a cell tower every 2-10 houses.

But former FCC Chairman Tom Wheeler has made it clear the Telecom-dominated FCC [does not put health first](#):

*"Stay out of the way of technological development," he said. "Unlike some countries, we do not believe we should spend the next couple of years studying... Turning innovators loose is far preferable to letting committees and regulators define the future. We won't wait for the standards." In response to questions about health concerns, Mr. Wheeler*

*said: "Talk to the medical people".*

Good idea.

The "medical people" have conducted over 2,000 international evidence-based studies that link health impacts with pulsed radiowave radiation from cell towers, routers, cell phones, tablets, and other wireless devices. These studies tell us that RF radiation is harmful at even low and short exposures, and that it impacts children and fetuses more rapidly than adults. Among the findings are that RF radiation is carcinogenic, causes DNA damage, affects fertility and the endocrine system, and has neurological impacts. Pulsed electromagnetic frequencies have also been shown to cause neurological symptoms: depression, anxiety, headaches, muscle pain, attention deficits, insomnia, dizziness, tinnitus, skin tingling, loss of appetite, and nausea.

The U.S. Government has known of these risks since at least 1971, when the Naval Medical Research and Development Command published a bibliography containing 3,700 references reporting 100 biological and clinical effects attributed to microwave and radio-frequency

radiation.

Recent findings, such as the \$30 million 2018 U.S. National Toxicology Program (NTP) Study, have corroborated the findings of all well-designed heart and brain cancer studies of people with 10 or more years' exposure to cellular radiation from cell towers and cell phones. They all agree: RF radiation causes cancer.
