

Australia Is Adopting China's Surveillance and Tracking Technology to Spy on Its Citizens

The city of Darwin, Australia is integrating Chinese surveillance technology that is used in its tyrannical social credit system for a new program Down Under called 'virtual fences' that will track people, their movements around the city, the websites they visit, and what apps they use. The monitoring will be done mainly by artificial intelligence, but will alert authorities based on set triggers.

On this May day, alarm bells should be sounding as China's internet standards and surveillance grid is spreading around the globe.

As reported [by the Epoch Times](#), the city of Darwin in Australia is preparing to integrate with Chinese surveillance technology that powers its social credit system. "Virtual

fences” will alert authorities of unauthorized activity.

According to the report, the technology is based on systems being used in Shenzhen, China where the social credit score is tracking Chinese citizens.

As reported, the system will be powered by artificial intelligence tracking individuals movements,

“In Darwin, they’ve already constructed “poles, fitted with speakers, cameras and Wi-Fi,” according to NT News, to monitor people, their movements around the city, the websites they visit, and what apps they use. The monitoring will be done mainly by artificial intelligence, but will alert authorities based on set triggers.

Just as in China, the surveillance system is being branded as a “smart city” program, and while Australian officials claim its operations are benign, they’ve announced it functions to monitor cell phone activity and “virtual fences” that will trigger alerts if people cross them.”

This is happening as free speech is being crushed. CBS news

recently promoted the idea that the United States [should look to countries like Australia](#) for a model for “regulating speech”.

Under the backdrop of “Russian meddling” and “fake news” narratives

there is an expectation among tech elites and globalists that internet

regulation and law in the west will yield to the Chinese model of

cyberspace.
