

Did China's Coronavirus Escape from the Wuhan Institute that Is Linked to the Communist Country's Biological Warfare Program?

written by GEG | January 28, 2020

Academics from the University of Hong Kong (HKU) now estimate that the number of infected in Wuhan has reached 43,590, a staggering 1456% higher than the official figure which stands at 2800. The Chinese government appears to not believe its own figure, as it has allocated \$9 billion in funding to combat the virus, and it has quarantined 60 million people.

The Wuhan Institute of Virology, about 20 miles from the seafood market that is the reported origin of the outbreak, has been studying coronavirus since at least 2016. Data shows 13 of the 41 initial cases of Wuhan Coronavirus had no link to the seafood market. The Wuhan Institute meets biosafety-level-4 standards, qualifying it to handle the most dangerous pathogens, and it is linked to China's Biological Warfare Program.

The mainstream media remains silent on the shipment of exceptionally virulent viruses from Canada's National Microbiology Laboratory (NML) that ended up in China in March 2019. After an investigation, Xiangguo Qiu, a prominent Chinese Canadian virologist who was the head of vaccine development at the Special Pathogens Program at NML, was kicked out of the Canadian government research facility, along with her biologist husband, and a number of Chinese students. Critics speculated that she may have transferred intellectual property to China and could be a bio-warfare agent.

- The Wuhan Institute of Virology has been studying coronavirus since at least 2016.
- A growing body of evidence suggests the Wuhan coronavirus may have leaked from the institute.
- If true, this would not be the first time a deadly virus has leaked from a Chinese research institute.

2016 documents show that the Wuhan Institute of Virology, an organization **increasingly suspected of being linked** to the Wuhan coronavirus outbreak, has been studying the virus over the last several years. This comes as a growing body of evidence suggests the disease did not originate in a seafood wet market as the Chinese government claims.

From ZeroHedge:

In March 2019, in mysterious event a shipment of exceptionally virulent **viruses from Canada's NML ended up in China**. The event caused a major scandal with Bio-warfare experts questioning why **Canada was sending lethal viruses to China**. Scientists from NML said the highly lethal viruses were a potential bio-weapon.

Following investigation, the incident was traced to **Chinese agents working at NML**. Four months later in July 2019, a group of **Chinese virologists were forcibly dispatched from the Canadian National Microbiology Laboratory (NML)**. The NML is Canada's only level-4 facility and one of only a few in North America equipped to handle the world's deadliest diseases, including Ebola, SARS, Coronavirus, etc.

The NML scientist who was escorted out of the Canadian lab along with her husband, another biologist, and members of her research team is believed to be a Chinese Bio-Warfare agent Xiangguo Qiu. Qiu was the head of the Vaccine Development and Antiviral Therapies Section in the Special Pathogens Program at Canada's NML.

Xiangguo Qiu is an outstanding Chinese scientist born in Tianjin. She primarily received her medical doctor degree from Hebei Medical University in China in 1985 and came to Canada for graduate studies in 1996. Later on, she was affiliated with the Institute of Cell Biology and the Department of Pediatrics and Child Health of the University of Manitoba, Winnipeg, not engaged with studying pathogens.
