

Large Collection of Data on Coronavirus Suggests the Illness Is Harmless, and that Deaths Are Caused by 5G

Large Collection of Data on Coronavirus Suggests the Illness Is Harmless, and that Deaths Are Caused by 5G

Here is a huge collection of articles, scientific studies, videos, and quotes relating to the Coronavirus. All together, the evidence strongly supports the conclusion that Coronavirus is no more dangerous than a common cold – perhaps even less so. There may be thousand of deaths from something, but not the virus. The data points to 5G electromagnetic exposure. Anyone seeking to gather as many facts on this issue as possible will save at least a month of research time by simply reviewing this huge document. -GEG

Could there be a link between the Coronavirus and 5G? Researcher and building biologist Paul Doyon has just spent the last 18 months in China. He's written a brilliant article laying out the evidence. And how you can protect yourself—an EMF based protection strategy. Warning: this is a heavy science based article with nearly 100 references to studies—neither Paul or myself want to be accused of fear-mongering:

My heart goes out to China and to all its people who have suffered so much due to this new “novel” Wuhan coronavirus outbreak (COVID-19).

However, as someone who had become very sick and had his immune system break down and was sick for six months looking for answers before even suspecting that living in close vicinity to several cell phone towers was actually what was causing the problem and making him sick, I feel I cannot in good conscience remain silent, and I strongly suspect that China and the rest of the world are looking under the wrong stone for what is actually the problem here.

At the moment, with 10,000 recently installed 5G antennas plastering its city, Wuhan is probably one of the most 5G-electropolluted cities on the planet.

Electrosmog Warnings from Scientists for Over 40 Years

Respected scientists, researchers, doctors, and activists have been – for over forty years – warning us about the dangers of wireless radiation and electromagnetic fields. In 1977, the reporter Paul Brodeur published a book called *The Zapping of America*; in 1985, the late Dr. Robert O. Becker (twice nominated for the Nobel Prize in Medicine for his work on cellular dedifferentiation and re-differentiation in the healing process) wrote *The Body Electric*, and later published *Cross Currents: The Perils of Electropollution, The Promise of Electromedicine* in 1990; in 1995 (and again later in 2007), B. Blake Levitt, author and researcher, published *Electromagnetic Fields: A Consumer's Guide to the Issues and How to Protect Ourselves*. Since then there have been a slew of other books and documentary movies put out on the subject. And the list goes on and on.

Dr. Leif Stafford, Swedish neuro-oncologist, has called this

wireless rollout

*“the largest biological experiment ever.”*¹

And Dr. Robert O. Becker wrote in 1985 that

The dangers of electropollution are real and well documented. *It changes, often pathologically, every biological system* [emphasis added]. What we don't know is exactly how serious these changes are, for how many people. The longer we as a society, put off a search for that knowledge, the greater the damage is likely to be and the harder it will be to correct. (p. 304)²

And finally, Dr. Martin Pall, PhD, and Professor Emeritus of Biochemistry and Basic Medical Sciences at Washington State University has stated recently that

Putting in tens of millions of 5G antennae without a single biological test of safety has got to be about the stupidest idea anyone has had in the history of the world.³

The BioInitiative

In 2007, a report titled the BioInitiative was published, it was republished again in 2012, and there have been ongoing updates between 2014 and 2019. Its website states that

the BioInitiative 2012 Report has been prepared by 29 authors from ten countries, ten holding medical degrees (MDs), 21 PhDs, and three MsC, MA or MPHs. Among the authors are three former presidents of the Bioelectromagnetics Society, and five full members of BEMS.⁴

These are highly respected scientists coming from some of the world's most respected universities and institutes.⁵

The BioInitiative further warns

... that evidence for risks to health has substantially increased since 2007 from electromagnetic fields and wireless technologies (radiofrequency radiation). The Report reviews over 1800 new scientific studies... Health topics include damage to DNA and genes, effects on memory, learning, behavior, attention, sleep disruption, cancer and neurological diseases like Alzheimer's disease. New safety standards are urgently needed for protection against EMF and wireless exposures that now appear everywhere in daily life. ⁶ See more scientific research here.

5G Warnings

With the coming advent of the newest in wireless technology, 5G, numerous researchers, doctors, and professional and activist organizations have been administering health warnings regarding its coming implementation. ^{7 8 9 10 11 12 13} See here the dangers of 5G radiation.

And even recently, there were marches in major cities throughout the world protesting the advent of this technology.

14

Unfortunately, for the majority of the population, these warnings have fallen on deaf ears, with the seemingly widely held view out there believing that 5G is the next best thing since Ben & Jerry's™ Cherry Garcia™ ice cream.

Of course, the downplaying of the hazards is understandable given the extreme benefits and conveniences all this technology has continuously offered an unsuspecting populace. Unfortunately, these people are also often quick to ridicule and marginalize those who try to warn of these dangers by labeling them as Luddite tinfoil-hat-wearing conspiracy

theorists, until, of course, either they or someone close to them suddenly gets sick and they then see a possible connection with these EMF exposures, and then suddenly there is a change of tune, and they are quick to inquire about what they can do to protect themselves: e.g. how to shield their homes and offices, what EMF meters to buy.

In Ripon, California, south of Sacramento, a 5G antenna was removed from a primary school, after some parents there started to suspect that it was linked to a number of cancer cases in the school. ¹⁵

The Coronavirus Outbreak

The recent COVID-19 outbreak has stimulated mass fear and mass hysteria across the planet, in spite of the fact that there have only been 93 deaths (at the time of this writing on February 29th, 2020) outside China, with 2835 of the deaths ¹⁷ and 99 percent of infections occurring within China. ¹⁸

In fact, the highest death rates outside of China have been in places already implementing 5G technology, South Korea and Italy, for example. The exception is Iran, which at present has 978 cases, and 54 deaths, is officially not implementing it, but very well may secretly be trialing it given the reason why

on December 1, 2018, at the request of the US government, Meng Wanzhou – Huawei's CFO and daughter of its founder – was arrested in Canada on allegations she participated in a conspiracy to defraud banks in connection with Iran sanctions violations, ¹⁹

was indeed because Huawei was working to sell their 5G technology to the Iranians. In fact, Iran – in a joint operation between Irancell and Ericsson – had started trialing

the technology back in September of 2017.²⁰ In the article, titled “Irancell, Ericsson Test 5G Systems,” (2017) it is stated that

the technology will be available by 2020 and become globally accessible a year later.

During the event at Irancell headquarters, the company’s CEO Alireza Dezfouli said *“We are aiming to keep pace with the international operators. Iran will not be left behind again.”*

Furthermore, a number of articles in the media, have stated that Iran has carried out “preparations” and is ready to launch 5G.^{21 22 23} Well, preparations usually include trialing. Hence, it is easy to believe that Iran already has the 5G infrastructure set up and they have been secretly trialing it.

Belgium, on the other hand, – which had decided not to even trial 5G, let alone implement it, due to radiation concerns²⁴ – has had only one case so far of the coronavirus (recovered) and no deaths.

In fact, for the majority, the symptoms of patients outside of China, (especially with those away from the 5G), for the most part, have seemingly been relatively mild, as one would most likely see with a regular cold or flu virus, and with many of those infected not showing any symptoms at all.

Mild Symptoms Outside China

It is stated by Dr. Maria Van Kerkhove, (Head of the WHO’s Health Emergencies Program), in the continuously updated Al Jazeera article, “What happens if you catch the new corona virus?” that *“some patients do not show any symptoms,”* and that

“You have mild cases, which look like the common cold, which have some respiratory symptoms, sore throat, runny nose,

fever, all the way through pneumonia. And there can be varying levels of severity of pneumonia all the way through multi-organ failure and death,” she told reporters in Geneva last week.

However, in most cases, symptoms have remained mild.

“We’ve seen some data on about 17,000 cases and overall 82 percent of those are mild, 15 percent of those are severe and 3 percent of those are classified as critical,” said Van Kerkhove. ¹⁸

Moreover, in numerous YouTube videos ^{25 26 27 28 29} we are seeing interviews with patients that have been seemingly showing only mild symptoms.

One example is that of Rebecca Frazier, interviewed numerous times on numerous news programs, after being admitted to a Tokyo Hospital after being found to be infected with the COVID-19 on the Diamond Princess Cruise Ship. In one of the interviews, conducted by the New Zealand news program on the Radio New Zealand (RNZ) network titled *“I never really felt unwell,”* for example, the interviewer states the following and then goes onto interview Ms. Frazier:
