

Curious Private Citizens Visit Hospitals and Find Empty Emergency Rooms

People who question the mainstream media's claims of hospitals looking like war zones due to floods of people infected and dying from the coronavirus have filmed scenes at hospitals that appear empty, as though the narrative has been invented. Other facilities have claimed to be overrun with people who want to be tested for the virus, but most testing stations also are empty.

New York City

Phyllis and William Mack Pavilion Hospital in Manhattan: One man in the emergency room, refrigerated truck on hand, but nothing going on. Bellevue Hospital: Looks empty from the street view. Kings County Hospital: 10 people standing around, but not busy. Brooklyn Hospital: not crowded, despite media claims to the contrary. No lines or chaos. Emergency ward in Jamaica Hospital: full and had people waiting; important to know that this hospital provides discount and free services to 'underserved' low-income community and is always busy. Waiting time is usually 4 to 5 hours, as seen from [Yelp reviews](#). (Note that hospital information ends at 7:20 and then there is a commercial that can be skipped).

Seattle

Man in Seattle shows that there is no one one in the Multicare Medical Center emergency waiting room except the security guard. He returned two weeks later and the waiting room was still empty with only a few people milling about.

Hawaii

Youtuber Jason Jones confronted Donna Schmidt, the CEO of Urgent Care Hawaii, who claimed that the medical facilities were overwhelmed by coronavirus testing requests, but when he visited an urgent care location, it was empty. She tried to knock the journalist's phone out of his hand while he was filming.

[Link for news story](#) featuring Donna Schmidt, the CEO of Urgent Care Hawaii, stating that the facilities were overrun with people requesting tests.

Kentucky

Norton East Hospital and Baptist East Hospital, both in Louisville, Kentucky had empty emergency rooms. University of Louisville Hospital was also empty in the waiting area.

Washington State

Trios Hospital in Kennewick, Washington had a completely empty parking lot.

Germany

A German journalist visited Virchow Hospital in Berlin, where another hospital told him all of the coronavirus patients would be treated, and instead of finding a media-hyped emergency situation due to a deluge of coronavirus patients, he found the emergency room empty.

Trump Calls For Additional \$2-Trillion Bailout In Phase-4 Stimulus

After signing the record-breaking \$6.2-trillion Coronavirus Stimulus Act over the weekend, President Trump called for an additional \$2-trillion spending in the upcoming 'phase 4' coronavirus stimulus. US agencies say they need \$600-billion of the pie.

President Trump has called for \$2 trillion in infrastructure spending in the upcoming 'phase 4' coronavirus stimulus.

"With interest rates for the United States being at ZERO, this is the time to do our decades long awaited Infrastructure Bill. It should be VERY BIG & BOLD, Two Trillion Dollars, and be focused solely on jobs and rebuilding the once great infrastructure of our Country! Phase 4," Trump tweeted on Tuesday.

As we [noted earlier](#), Congressional Democrats and the White House have been compiling their lists of what they say is needed in the next package.

Prime among them is "our infrastructure needs," according to House Speaker Nancy Pelosi, who told *MSNBC* on Tuesday that "Many more people are teleworking, or tele-educating or really communicating with family and friends."

"There are infrastructure needs that our country has that directly relate to how we are proceeding with the coronavirus. Many more people are teleworking, or tele-educating or really communicating with family and friends," said Pelosi, according to *the Washington Times*.

In an interview Tuesday with MSNBC, Pelosi said negotiators

had already agreed that “everything will be specific to the coronavirus” in the next round of legislation and that it wouldn’t become a “wish list.”

In an interview with the New York Times published on Monday, Pelosi indicated that another possible move was getting rid of the limit on state and local tax deductions, or SALT, that was part of the 2017 tax overhaul and affects California, Pelosi’s home state, and New York. –[Bloomberg \(via Yahoo!\)](#)

Senate Finance Committee Chairman Chuck Grassley (R-IA) says Pelosi’s SALT plan is “a nonstarter.”

“Millionaires don’t need a new tax break as the federal government spends trillions of dollars to fight a pandemic,” said spokesman Michael Zona.

Also being pushed by Pelosi is a vote-by-mail system amid the ongoing coronavirus pandemic.

“In terms of the elections, I think that we will probably be moving to vote by mail,” she told *MSNBC*’s “Morning Joe” on Tuesday, adding that it’s a “reality of life” now.

Congressman called 'Most Hated Man in Washington' Stands Alone Against Bailout

Thomas Massie explains that the Coronavirus stimulus bill is the largest wealth transfer in human history and would make Roman emperors blush. \$6-trillion divided by US population means each family will pay \$60,000. \$1,200 given back to taxpayers is "cheese" in the trap. Most of the money will go to banks and large corporations with political influence. Massie says the House avoided a recorded vote because they fear being booted out of office in future elections if it could be proved they voted for the bill. This is a long interview but is packed with inside glimpses of how corrupt Congress has become. -GEG

Economic Crisis Caused by Politicians and Bankers Being Blamed on Covid-19. How

Convenient!

Jerry Day explains why the tests for coronavirus are worthless. The tests have been used on dead people to create false death statistics. Day points to the real crisis, which is economic, caused by debt and policies of the banking cartel called the Federal Reserve. -GEG

The following is from a medical forum. The writer, who is a widely respected professional scientist in the US, prefers to stay anonymous, because presenting any narrative different than the official one can cause you a lot of stress in the toxic environment caused by the scam which surrounds COVID-19 these days. – Julian Rose

I work in the healthcare field. Here's the problem, we are testing people for any strain of a Coronavirus. Not specifically for COVID-19. There are no reliable tests for a specific COVID-19 virus. There are no reliable agencies or media outlets for reporting numbers of actual COVID-19 virus cases. This needs to be addressed first and foremost. Every action and reaction to COVID-19 is based on totally flawed data and we simply can not make accurate assessments.

This is why you're hearing that most people with COVID-19 are showing nothing more than cold/flu like symptoms. That's because most Coronavirus strains are nothing more than cold/flu like symptoms. The few actual novel Coronavirus cases do have some worse respiratory responses, but still have a very promising recovery rate, especially for those without prior issues.

The 'gold standard' in testing for COVID-19 is laboratory isolated/purified coronavirus particles free from any contaminants and particles that look like viruses but are not, that have been proven to be the cause of the syndrome known as COVID-19 and obtained by using proper viral isolation methods and controls (not the PCR that is currently being used or Serology /antibody tests which do not detect virus as such). PCR basically takes a sample of your cells and amplifies any DNA to look for 'viral sequences', i.e. bits of non-human DNA that seem to match parts of a known viral genome.

The problem is the test is known not to work.

It uses 'amplification' which means taking a very very tiny amount of DNA and growing it exponentially until it can be analyzed. Obviously any minute contaminations in the sample will also be amplified leading to potentially gross errors of discovery.

Additionally, it's only looking for partial viral sequences, not whole genomes, so identifying a single pathogen is next to impossible even if you ignore the other issues.

[The New Coronavirus Outbreak, COVID-19, Sounds Menacing and Is](#)

The Mickey Mouse test kits being sent out to hospitals, at best, tell analysts you have some viral DNA in your cells. Which most of us do, most of the time. It may tell you the viral sequence is related to a specific type of virus – say the huge family of coronavirus. But that's all. The idea these kits can isolate a specific virus like COVID-19 is nonsense.

And that's not even getting into the other issue – viral load.

If you remember the PCR works by amplifying minute amounts of DNA. It therefore is useless at telling you how much virus you may have. And that's the only question that really matters when it comes to diagnosing illness. Everyone will have a few virus kicking round in their system at any time, and most will not cause illness because their quantities are too small. For

a virus to sicken you you need a lot of it, a massive amount of it. But PCR does not test viral load and therefore can't determine if it is present in sufficient quantities to sicken you.

If you feel sick and get a PCR test any random virus DNA might be identified even if they aren't at all involved in your sickness which leads to false diagnosis.

And coronavirus are incredibly common. A large percentage of the world human population will have covi DNA in them in small quantities even if they are perfectly well or sick with some other pathogen.

Do you see where this is going yet? If you want to create a totally false panic about a totally false pandemic – pick a coronavirus.

They are incredibly common and there's tons of them. A very high percentage of people who have become sick by other means (flu, bacterial pneumonia, anything) will have a positive

PCR test for covi even if you're doing them properly and ruling out contamination, simply because covis are so common.

There are hundreds of thousands of flu and pneumonia victims in hospitals throughout the world at any one time.

All you need to do is select the sickest of these in a single location – say Wuhan – administer PCR tests to them and claim anyone showing viral sequences similar to a coronavirus (which will inevitably be quite a few) is suffering from a 'new' disease.

Since you already selected the sickest flu cases a fairly high proportion of your sample will go on to die.

You can then say this 'new' virus has a CFR higher than the flu and use this to infuse more concern and do more tests which will of course produce more 'cases', which expands the

testing, which produces yet more 'cases' and so on and so on.

Before long you have your 'pandemic', and all you have done is use a simple test kit trick to convert the worst flu and pneumonia cases into something new that doesn't actually exist.
