

Pentagon Study: Flu Shot Raises Risk of Coronavirus by 36% (Read that Again!)

A 2020 study by the Pentagon found that the flu shot INCREASES the risks of coronavirus by 36%. "Receiving influenza vaccination may increase the risk of other respiratory viruses, a phenomenon known as "virus interference" and "examining non-influenza viruses specifically, the odds of coronavirus in vaccinated individuals were significantly higher when compared to unvaccinated individuals."

The article includes other studies that suggest an increased risk of viral respiratory infections from the flu shot. The Cochrane Collaboration's 2010 meta-analysis of influenza-vaccine studies found the influenza vaccination has "no effect" on reducing hospitalization, and there is "no evidence that vaccines prevent viral transmission or complications." - GEG

On March 12th, 2020, Anderson Cooper and Dr. Sanjay Gupta held a global town hall on "Corona Facts and Fears." During the discussion, Anderson said to the viewing audience, "And, again, if you are concerned about coronavirus, and you haven't gotten a flu shot...you should get a flu shot."

Setting safety and efficacy of influenza vaccination aside, is Anderson's claim that the flu shot will help people fight COVID-19 remotely true? The short answer is no.

In fact, the results of many peer-reviewed, published studies prove that Anderson's recommendation may have been the worst advice he could have given the public.

In searching the literature, the only study we have been able to find assessing flu shots and coronavirus is a 2020 US Pentagon study that found that the flu shot INCREASES the risks from coronavirus by 36%. "Receiving influenza vaccination may increase the risk of other respiratory viruses, a phenomenon known as "virus interference... 'vaccine derived' virus interference was significantly associated with coronavirus..." Here are the findings:

2020 Pentagon study: Flu vaccines increase risk of coronavirus by 36%

Examining non-influenza viruses specifically, the odds of coronavirus in vaccinated individuals were significantly higher when compared to unvaccinated individuals with an odds ratio (association between an exposure and an outcome) of 1.36. In other words, the vaccinated were 36% more likely to get coronavirus.

Protests Against Quarantines Are Appearing Globally but Downplayed by the Media

James Corbett shows video of protests against quarantines and business shut-downs around the world that are killing economies. He exposes Google, DuckDuckGo, and Start Page for censoring information about these protests. Corbett concludes that the pandemic is a fake reality that exists only because people believe it exists. Any evidence that would weaken that belief, therefore, must be blocked. Perhaps the most important part of his analysis is that mass refusal to comply with totalitarian edicts is the only way to halt and then reverse the process. -GEG

Are There Lockdown Protests? – Questions For Corbett #060

Wisconsin Sheriff Says He Will Not Enforce Stay-at-Home Order, Cites Constitutional Rights

Wisconsin Governor Tony Evers extended his stay-at-home orders through May 26 and said, “things won’t get back to normal until there’s a vaccine and treatment for this disease”. However, Racine County Sheriff Christopher Schmaling says he will not enforce the orders, because state law “does not have the power to supersede or suspend the Constitutional rights of American citizens.” He urged the state’s health department to balance safety with allowing businesses to operate. He said, “I took an oath to uphold the constitutional rights of our citizens and I cannot in good faith participate in the destruction of Racine County businesses or interfere in the freedoms granted to all of us by our Constitution.” -GEG

“Have You Accidentally Killed

Someone Today?" Oregon Shames People Into Staying Home

Oregon's Public Service Announcements are using shame to make people stay at home by making them think that, if they do not do so, they may kill an innocent person. The campaign slogan is "Don't accidentally kill someone. Stay home." Propaganda doesn't get any more obvious than that. -GEG

Oregon public service announcements are shaming people into staying home so they don't kill people amid the Coronavirus outbreak.

The "Stay Home, Save Lives" campaign is a public-private partnership to communicate to Oregonians about how they can do their part to contain the spread of COVID-19. according to the government website.

If you want to get back to work so you can feed your family and keep a roof over your head, then you are a murderer.

Seattle

COVID-19

Field

Hospital Dismantled Because There Were No Patients to Treat

Washington state: The massive 250-bed army field hospital that hundreds of troops built inside a Seattle convention center was dismantled before treating a single patient. Washington also returned 400 ventilators. -GEG

The massive army field hospital that hundreds of troops built inside a Seattle convention center last week will be dismantled before treating a single patient.

Instead, it will be redeployed to a state facing a more difficult battle against the coronavirus outbreak, Washington Gov. Jay Inslee said Wednesday.

Nearly 300 soldiers from Fort Carson, Colo. and Joint Base Lewis-McChord (JBLM) near Tacoma, Wash., built the makeshift facility inside CenturyLink Field Event Center, normally home to the NFL's Seattle Seahawks and the Seattle Sounders of the MLS, for patients who do not have COVID-19.

"We requested this resource before our physical distancing strategies were fully implemented and we had considerable concerns that our hospitals would be overloaded with Covid-19 cases," Inslee said in a press release.

The facility housed 250 beds, a lab, X-ray machines, surgery facilities and an intensive care unit.

But Washington's early action to limit the spread of COVID-19 has helped the state to slow the disease's infection rate and allowed hospitals to maintain the capacity to support a surge in patients, Inslee said.

“These soldiers uprooted their lives to help Washingtonians when we needed them most,” Inslee said. “Since then, it’s become apparent that other states need them more than we do. It’s only right that we release this capability, so those states have the tools necessary to help end this nation-wide fight that we are all battling together.”

Las Vegas Mayor Blasts ‘Total Insanity’ of Shutdown

After Steve Sisolak, the Democrat Governor of Nevada, said he had no immediate plans to ease the mass shutdown and closures of “nonessential” businesses statewide, Las Vegas Mayor Carolyn Goodman blasted the actions, saying the lockdown has reached a point of “total insanity”. Data indicates that 128 people, less than half of one percent of the population, have died from illness attributed to the coronavirus. The population of Nevada’s population is 3.2 million people, and she estimates that 900,000 have already lost their jobs, with 300,000 of those filing for unemployment. -GEG

Carolyn Goodman (D), mayor of Las Vegas, Nevada, on Wednesday blasted the mass shutdown resulting in the closures of nonessential businesses statewide, proclaiming that the actions have reached a point of “total insanity,” stressing that it is “killing” Las Vegas, and urging people to “remember

the data.”

Goodman made the remarks at Wednesday’s city council meeting, which followed Nevada Gov. Steve Sisolak (D) signaling that he does not have immediate plans to reopen portions of the state’s economy.

“This is truly an opportunity for having a bully pulpit as your mayor,” Goodman said, “and I am going to take advantage of that before we begin our public comment.”

“This shutdown has become one of total insanity,” she said, explaining that the virus is not going to suddenly disappear. Therefore, she said, society must figure out how to move forward amid its existence.

“It’s not going to be going away this month, next month, and much like the flu and other viruses that have impacted populations around the world, this virus, or a derivative there of, will be part of what we work through going forward,” she said.

She gave her condolences to those who have been affected by the virus but tried to put the crisis in greater perspective, noting that those whom have died as a result of the virus in Nevada “represent less than half of one percent” of the state’s population.

She said:

We are a state of 3.2 million people, and we’ll soon find out how that changes as we go through our census shortly. 2.3 of us live down here in Southern Nevada. Tragically, we have already lost to this virus 128 individuals in Nevada. [HHS reports 131] Many with complications attributed, in part, to COVID-19. Let me assure you that our sympathies and condolences to those who have lost loved ones. But let me tell you – with a population of 3.2 million living in Nevada, those whom we lost represent less than a half of one percent

of our population, which has caused us to shut down the entire state and everything that makes Nevada unique.

Goodman said an estimated 900,000 have already lost their jobs, and 300,000 of those have already filed for unemployment.

“300,000 have filed for unemployment,” she emphasized.

“These are families that no longer have the ability to buy food for their children and other loved ones, pay their bills, pay their rent, pay their mortgage, pay their car payment, or enjoy the life that they had prior to this shutdown,” she continued.

“We cannot live going forward with the medical health industry telling us that this virus is going to be around longer than a month or two, maybe even a year,” she said. “We cannot keep our heads in the sand and think its going to go away.”

“We’re adults with brains who can know what to do, to wash our hands and take all precautions not to spread this disease. But we cannot put our head in the sand and think it’s going to go away,” she continued.

Flashback: In 2009 the CDC Lied about 22-Million People Getting the Swine Flu

In 2009, the World Health Organization hyped the H1N1 flu “pandemic” big time. Sharyl Attkisson, an investigative reporter for CBS, got a tip that the CDC stopped even counting H1N1 cases and patient deaths and that almost none of the cases they had counted as Swine Flu was, in fact, Swine Flu or any sort of flu at all! In other words, the numbers were fictitious. But that didn’t stop the CDC from claiming that 14 to 34-million people got infected with the H1N1. -GEG

The CDC would never launch a fake epidemic; certainly not...

And meet our old friend, Dr. Anthony Fauci, in another context...

History matters.

So I take you back to the summer of 2009, when the CDC and the World Health Organization were hyping the “deadly H1N1 Swine Flu pandemic.”

They were, of course, also urging people to take the new Swine Flu vaccine. On that subject, here is an excerpt from Robert Kennedy Jr.’s Children’s Health Defense (3/27/20):

“For example, [Dr. Anthony] Fauci once shilled for the fast-tracked H1N1 influenza (‘swine flu’) vaccine on YouTube, reassuring viewers in 2009 that serious adverse events were ‘very, very, very rare.’ Shortly thereafter, the vaccine went on to wreak havoc in multiple countries, increasing miscarriage risks in pregnant women in the U.S., provoking a spike in adolescent narcolepsy in Scandinavia and causing febrile convulsions in one in every 110 vaccinated children in Australia—prompting the latter to suspend its influenza

vaccination program in under-fives.”

Thank you. Dr. Fauci. Explain to us why you haven't been downgraded to pumping gas in Death Valley or sent to prison?

Back to the Swine Flu pandemic. In the summer of 2009, the CDC was claiming there were thousands of cases in the US. But behind these statistics lay an unnerving secret. A crime, considering the CDC's mandate to report the truth to the American people:

Secretly, the CDC had stopped counting cases of Swine Flu.

What? Why?

CBS investigative reporter, Sharyl Attkisson, discovered the CDC secret; and she found out why.

The routine testing of tissue samples from the most likely Swine Flu patients was coming back, in the overwhelming percentage of cases, with: NO SIGN OF SWINE FLU OR ANY OTHER KIND OF FLU.

Attkisson wrote an article about this scandal, and it was published on the CBS News website. However, the next, bigger step—putting out the story on CBS television news—was waylaid. No deal. And CBS shut down any future investigation on the subject. Attkisson's article died on the vine. No other major news outlet in the world picked up her article and ran with it deeper into the rabbit hole.

Here is what Attkisson told me when I interviewed her:

Rappoport: In 2009, you spearheaded coverage of the so-called Swine Flu pandemic. You discovered that, in the summer of 2009, the Centers for Disease Control, ignoring their federal mandate, [secretly] stopped counting Swine Flu cases in America. Yet they continued to stir up fear about the “pandemic,” without having any real measure of its impact. Wasn't that another investigation of yours that was shut down?

Wasn't there more to find out?

Attkisson: The implications of the story were even worse than that. We discovered through our FOI efforts that before the CDC mysteriously stopped counting Swine Flu cases, they had learned that almost none of the cases they had counted as Swine Flu was, in fact, Swine Flu or any sort of flu at all! The interest in the story from one [CBS] executive was very enthusiastic. He said it was "the most original story" he'd seen on the whole Swine Flu epidemic. But others pushed to stop it [after it was published on the CBS News website] and, in the end, no [CBS television news] broadcast wanted to touch it. We aired numerous stories pumping up the idea of an epidemic, but not the one that would shed original, new light on all the hype. It was fair, accurate, legally approved and a heck of a story. With the CDC keeping the true Swine Flu stats secret, it meant that many in the public took and gave their children an experimental vaccine that may not have been necessary.

—end of interview excerpt—

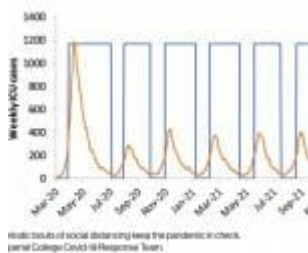

So...fake pandemic, CDC crimes, and a damaging vaccine.

But that wasn't end of it. The CDC wanted to commit another crime. About three weeks after Attkisson's findings were published on the CBS News website, the CDC, obviously in a panic, decided to double down. If one lie is exposed, tell an even bigger one. A much bigger one.

Here, from a November 12, 2009, WebMD article is the CDC's response: "Shockingly, 14 million to 34 million U.S. residents – the CDC's best guess is 22 million – came down with H1N1 swine flu by Oct. 17 [2009]." ("*22 million cases of Swine Flu in US,*" by Daniel J. DeNoon).

Are your eyeballs popping? They should be.

Authorities Say 6 More Waves of COVID-19 Expected- Which Is Proof It Is Planned

Last month, Gideon Lichfield, the Editor-in-Chief of *MIT Technology Review*, wrote about a proposal from the Imperial College of London, the institution that created the fake models that warned the US would suffer 2-million deaths from COVID-19. A new model shows six spikes that are projected to continue through to November 2021. The discredited staff now concludes that isolation and school closures will be needed two-thirds of the time, roughly two months on and one month off, until a vaccine is available, which will take at least 18 months.

A Chinese study showed that the country's PCR swab test is so inaccurate it gave a false positive 80% of the time for those who were diagnosed based on contact only. Nevertheless, authorities can use these tests to claim a pandemic and shut down society. Last week, Professor Anthony Costello, of University College London's Institute for Global Health, made essentially the same prediction, apparently based on the same computer models. UK Health Secretary Matt Hancock says the government will soon release a contact-tracing app to track everyone's movements and show the identity of everyone they come near. According to the BBC, cell-phone users will be required to answer an on-screen questionnaire. If judged to be

'at risk' of infection, alerts will be sent to everyone they have been near, ordering them to immediately go into self-isolation. A similar app was used in China during the initial phases of the pandemic. Citizens who refused to install it were banned from entering public spaces and from using public transport. -GEG

MIT Technology Review

To stop coronavirus we will need to radically change almost everything we do: how we work, exercise, socialize, shop, manage our health, educate our kids, take care of family members.

We all want things to go back to normal quickly. But what most of us have probably not yet realized—yet will soon—is that things won't go back to normal after a few weeks, or even a few months. Some things never will.

It's now widely agreed (even by Britain, finally) that every country needs to "flatten the curve": impose social distancing to slow the spread of the virus so that the number of people sick at once doesn't cause the health-care system to collapse, as it is threatening to do in Italy right now. That means the pandemic needs to last, at a low level, until either enough people have had Covid-19 to leave most immune (assuming immunity lasts for years, which we don't know) or there's a vaccine.

How long would that take, and how draconian do social

restrictions need to be? Yesterday President Donald Trump, announcing new guidelines such as a 10-person limit on gatherings, said that “with several weeks of focused action, we can turn the corner and turn it quickly.” In China, six weeks of lockdown are beginning to ease now that new cases have fallen to a trickle.

But it won't end there. As long as someone in the world has the virus, breakouts can and will keep recurring without stringent controls to contain them. In a report yesterday (pdf), researchers at Imperial College London proposed a way of doing this: impose more extreme social distancing measures every time admissions to intensive care units (ICUs) start to spike, and relax them each time admissions fall. Here's how that looks in a graph.

Meat-Processing Plant Must Kill 2-Million Chickens Due to Stay-at-Home Campaign

Allen Harim Foods, a Delaware-based chicken company, is being forced to kill up to 2-million chickens, because staffing shortages prevent the company from processing and delivering. Last week, the president and CEO of Smithfield Foods, one of the nation's largest meat-processing companies, warned of "severe, perhaps disastrous" consequences for the country's meat-supply chain following the closure of several of its plants. -GEG

Republican Kentucky Rep Thomas Massie warned just days ago that struggling farmers faced with economic Armageddon could soon be forced to start euthanizing their livestock even though the US is facing potential food shortages.

It's already happening.

Thomas Massie  @RepThomasMassie

Reverse course before people get hungry. This is a serious issue that needs addressed immediately.
