

Catherine Austin Fitts Explains the Politics of COVID-19

Catherine Austin Fitts says there is a connection between what she calls the current plandemic and the fact that we are in the middle of an economic war. America traded the gold standard for pegging the US dollar to oil, but the rest of the world wants to break free from the US dollar. She says the pandemic is being used to stop inflation, which will result from an economic slump. China is planning the Silk Road to capture the center of global power. China is no longer buying US Treasury notes but is using the ones she already holds to buy American businesses, natural resources, and land. Fitts also says Israel and the US co-engineered 5G for crowd-control purposes and that the contest between China and the US over 5G is to determine who will control the backdoor of the technology. She has much more to say about globally prominent personalities, housing bubbles, missing trillions of government money, civil war, global war, and crypto currency. If you are looking for a different perspective on current affairs, this is it. -GEG
