

How the UN Plans to Make People Move to Smart Cities and Go Vegan

Journalist Sandi Adams uncovered a UN paper that shows a new excuse for following the UN's Agenda 2030 goal of forcing people out of rural lands and into 'Smart Cities'. She found a United Nations Environment Programme document that claims COVID-19 is a zoonotic disease, meaning it jumps between animals and people, and that livestock serve as a bridge between wildlife and human infections. [To make a long story short, the laborious and twisted argument is that we now have one more frightful natural phenomenon (COVID-19) as an excuse to herd everyone into cities where they can be more easily monitored and controlled. Living on a farm now is dangerous to human health!] -GEG

I keep hearing the word 'Zoonotic' being bandied about in the press in the last few days. Could this be a form of preparation for what's coming?

I have been wondering how the next phase of the global UN Agenda 2030 could be played out. After all, the end game plan is to re-wild the countryside and herd us all into their SMART-controlled cities and habitation zones.

I found what could be the answer on the United Nation's Environment Programme's website yesterday. Here is UNEP's Factsheet for Zoonotic Diseases.

This is what they say...

“COVID-19 is a zoonotic disease, meaning that it jumps between animals and people, and is therefore closely connected to lands they inhabit. Human and economic activity is eroding wild spaces, forests and other important ecosystems, bringing us closer to “reservoir hosts”-animals and plants that can harbour diseases.”

“COVID-19 underscores the relationship between human health and nature and reveals a fundamental problem, humans have unlimited needs, but the planet has limited capacity to satisfy them. Often, land degradation is caused by unsustainable human consumption and needs.

Scientists and specialists working at UNEP have been pulling together the latest scientific facts about the Coronavirus – what we do know about the virus...and what we don't know.

While the origin of the outbreak and its transmission pathways are yet to be discovered, here are six important points worth knowing:

1. The interaction of humans or livestock with wildlife exposes them to the risk of spill-over of potential pathogens. For many zoonoses, livestock serve as an epidemiological bridge between wildlife and human infections.

2. The drivers of zoonotic disease emergence are changes in the environment- usually the result of human activities, ranging from land use change to changing climate; changes in animals or human hosts; and changes in pathogens, which always evolve to exploit new hosts.

3. For example, bat associated viruses emerged due the loss of bat habitat from deforestation and agricultural expansion. Bats play important roles in ecosystems by being night pollinators and eating insects.

4. Ecosystem integrity underlines human health and development. Human induced environmental changes modify wildlife population structure and reduce biodiversity, resulting in new environmental conditions that favour particular hosts, vectors and /or pathogens.

5. Ecosystem integrity can help regulate disease by supporting a diversity of species so that it's more difficult for one pathogen to spill over, amplify or dominate.

6. It is impossible to predict where the next outbreak will come from or when it will be. Growing evidence suggests that outbreaks or epidemic diseases may become more frequent as climate continues to change.

Georgia: Governor Kemp Is Suing Mayor Bottoms and Atlanta City Council Over Mask Mandate

Georgia Governor Brian Kemp bucked the current trend and overruled all local governments within the state that issued a mandatory mask order. He said the mandates are unenforceable. He is suing Atlanta Mayor Keisha Bottoms over her mandatory mask order and said the lawsuit is on behalf of Atlanta business owners and their employees who are struggling to survive during these difficult times. Last week, Mayor Bottoms said she tested positive for COVID-19, but has no symptoms. - GEG

Nearly 40 States Require Face Masks. But Is It Constitutional?

Nearly 40 states now require face masks after CDC Director Dr. Robert Redfield said if the American public were to embrace

masking now the pandemic could be brought to heel in less than two months. [It always has been at heel.]

Louisiana Attorney General Jeff Landry, a Republican, issued a 9-page opinion against Governor Bel Edwards' mask order because it is "likely unconstitutional and unenforceable" and that the mandate cannot be enforced without facing financial or criminal penalties. He said the governor has no power to turn an executive order (which is an directive to government employees under him) into a law, which applies to citizens. According to Landry, companies and police that try to enforce the mandate, under color of law could face liability if individual civil rights are violated because of it. Landry concluded: "The mask mandate flatly violates due process, separation of powers, the delegation clause, state public accommodation anti-discrimination law, and it is unenforceable." -GEG

Louisiana Attorney General Jeff Landry (R) said Wednesday in a 9-page legal opinion that the Democrat governor's mask mandate is "likely unconstitutional and unenforceable."

Democrat Governor John Bel Edwards over the weekend announced a statewide mask mandate and additional restrictions for bars.

The Republican Attorney General said the Governor's additional restrictions being placed on citizens has no rhyme or reason and doesn't appear to serve achieving a goal.

"The governor's recent mandate does not appear to serve achieving any type of goal or mission in a manner consistent with statutory authority and constitutional provisions," Landry wrote.

Landry also said the new mandate cannot be enforced with financial or criminal penalties.

"Although the mask mandate and the 50-person limit may be good recommendations for personal safety, they may not be enforced with financial or criminal penalties," Landry wrote. "Both

businesses acting under color of law as mask police and actual police acting as mask police could face liability if individual civil rights are violated due to the proclamation.”

Landry also said that the Governor has no power to make substantive law through an executive order, even in an emergency and asserts that the mask mandate “exposes individuals to unlawful searches and seizures, as well as burdens them with exposing potentially sensitive personal health information and having it exposed to others in a public setting.”

“The mask mandate flatly violates due process, separation of powers, the delegation clause, state public accommodation anti-discrimination laws and it is unenforceable,” Landry wrote.
