

Chief Science Officer for Pfizer Says Second Wave Was Faked on False-Positive COVID Tests, and that the “Pandemic Is Over”

Dr. Mike Yeadon, a former Chief Science Officer of infectious disease for the pharmaceutical giant Pfizer, says “there is no science to suggest a second wave should happen.” He further stated that false positive results from unreliable COVID tests are being used to manufacture a “second wave” based on “new cases.” He said that, based on death rates and hospitalization, “the pandemic is fundamentally over.” He wrote a paper with two colleagues and stated that lockdowns have made no difference in infection rate outcomes, but the lockdowns are the cause of economic devastation. In Germany, an organization of 500 German doctors and scientists has formed, who say that government response to the COVID virus has been vastly out of proportion to the actual severity of the disease.

Charts based on European CDC data show the disparity between the number of claimed COVID cases compared COVID death rates make it obvious that politicians, health officials and the media are lying about COVID being an emergency that requires lockdowns and other tyrannical policies.

In a stunning development, a former Chief Science Officer for

the pharmaceutical giant Pfizer says “there is no science to suggest a second wave should happen.” The “Big Pharma” insider asserts that false positive results from inherently unreliable COVID tests are being used to manufacture a “second wave” based on “new cases.”

Dr. Mike Yeadon, a former Vice President and Chief Science Officer for Pfizer for 16 years, says that half or even “almost all” of tests for COVID are false positives. Dr. Yeadon also argues that the threshold for herd immunity may be much lower than previously thought, and may have been reached in many countries already.

In an interview last week Dr. Yeadon was asked:

“we are basing a government policy, an economic policy, a civil liberties policy, in terms of limiting people to six people in a meeting...all based on, what may well be, completely fake data on this coronavirus?”

Dr. Yeadon answered with a simple “yes.”

Dr. Yeadon said in the interview that, given the “shape” of all important indicators in a worldwide pandemic, such as hospitalizations, ICU utilization, and deaths, “the pandemic is fundamentally over.”

Yeadon said in the interview:

“Were it not for the test data that you get from the TV all the time, you would rightly conclude that the pandemic was over, as nothing much has happened. Of course people go to the hospital, moving into the autumn flu season...but there is

no science to suggest a second wave should happen.”

In a paper published this month, which was co-authored by Yeadon and two of his colleagues, “How Likely is a Second Wave?”, the scientists write:

“It has widely been observed that in all heavily infected countries in Europe and several of the US states likewise, that the shape of the daily deaths vs. time curves is similar to ours in the UK. Many of these curves are not just similar, but almost super imposable.”

In the data for UK, Sweden, the US, and the world, it can be seen that in all cases, deaths were on the rise in March through mid or late April, then began tapering off in a smooth slope which flattened around the end of June and continues to today. The case rates however, based on testing, rise and swing upwards and downwards wildly.

Media messaging in the US is already ramping up expectations of a “second wave.”
