

G. Edward Griffin: How a Secret Society Created the Federal Reserve, the Source of Economic Disaster, at Jekyll Island

G. Edward Griffin discusses the origins of the Federal Reserve, the plot behind its creation by men who, at the time of the covert meeting in 1913, controlled a quarter of the world's wealth, and now they control even more. The Federal Reserve has had only negative consequences on the American economy in causing cycles of inflation and depressions. Griffin reveals the plans of the bankers, led by the Rothschild and Rockefeller families, that are now unfolding. This interview is very timely as Mr. Griffin is holding his annual Red Pill Expo on Jekyll Island this weekend, October 10 and 11. If you cannot make it to this historic event, it will be broadcast livestream – please click this link for more details: RedPillExpo.org
