

Is COVID-19 Being Blamed for 5G Radiation Sickness?

written by GEG | November 30, 2020

Tokyo Bay, Japan: Japanese health officials pronounced that 10 persons on board the *Diamond Princess* were diagnosed as having Covid-19 on February 5, 2020. The ship was ordered quarantined for 14 days. Within 8 days, a total of 218 people were diagnosed with having Covid-19. A little known fact is that the *Diamond Princess* was sporting new 5G towers. Outbreaks were discovered only on the ships that had 5G installed.

Dr. Magda Havas, Ph.D, performed a study comparing the average number of cases, deaths, and tests for Covid-19 in states with and without 5G. She reported that Covid cases are 95% higher and Covid deaths 126% higher in states with 5G than in states without 5G.

A Spanish study found that countries with 5G had 220% more Covid-19 infections than countries without 5G. San Marino, a micro-state next to Italy, was the first European state to adopt 5G technology and had virtually no regulations on its use. San Marino now has the highest incident of Covid-19 in Europe, with a rate 27 times greater than the infection rate in Croatia, which is free from 5G. [Coincidence? We don't think so, either.] -GEG

On February 5, the *Diamond Princess* was boarded at port Yokohama in Tokyo Bay by Japanese health officials. Those health officials pronounced that 10 persons on board were diagnosed as having coronavirus, later known as COVID-19. The ship was ordered quarantined for 14 days. Nobody could leave the ship during the quarantine period. Within 3 days another 125 passengers were diagnosed with having COVID-19). By February 13, a total of 218 people were diagnosed with having COVID-19.

A little known fact is that the *Diamond Princess* was sporting some new high tech 5G towers. An earlier news release explained that "*Princess Cruises has announced a new dimension in its connectivity partnership with SES and will become the first global*

cruise ship fleet with early access to SES's 03b mPOWER network augmenting the Princess Medallion Class experience as it scales across the fleet, according to a press release." *Cruise Industry News*, February 3, 2020.

Is there a connection between the newly installed 5G network on the ship and the passengers being struck ill with coronavirus? It should be noted that only the Princess cruise line that had installed the 5G had outbreaks of COVID-19. In March 2020, the *Grand Princess* had outbreaks of COVID-19 before docking in San Francisco. The *Ruby Princess* was reported to have had an outbreak of COVID-19 involving 600 passengers prior to docking on March 19, 2020, at Sydney, Australia. All of those ships are Medallion Class ships with the new 5G tower connectivity from SES's 03b mPOWER.
