

CNN Says: 'Don't Be Alarmed' If People Start Dying After Taking the Vaccine

written by GEG | December 15, 2020

Elderly and frail people are slated to be the first to receive the Pfizer vaccine that was given an emergency-use authorization in the US. In an article on the COVID vaccine rollout, CNN says that Americans shouldn't be alarmed if people start dying after taking the vaccine because "deaths may occur that won't necessarily have anything to do with the vaccine." Dr. Kelly Moore cautioned that vaccines don't work as well on the frail, and elderly people may die shortly after they receive a vaccine, not because it has anything to do with the vaccination, but because these people are at the end of their lives anyway. [Of course, if they die without the vaccine, they will be classified as a death by COVID.] -GEG

In an article on the COVID vaccine rollout, CNN says that Americans shouldn't be alarmed if people start dying after taking the vaccine because "deaths may occur that won't necessarily have anything to do with the vaccine."

The advisory appeared in an [article](#) titled 'Why vaccinate our most frail? Odd vote out shows the dilemma' in which Dr. Kelly Moore, associate director of the Immunization Action Coalition, cautions that vaccines don't work as well on the frail and elderly compared to healthy people.

"When shots begin to go into arms of residents, Moore said Americans need to understand that deaths may occur that won't necessarily have anything to do with the vaccine," states the report.

"We would not at all be surprised to see, coincidentally, vaccination happening and then having someone pass away a short time after they receive a vaccine, not because it has anything to do with the vaccination but just because that's the place where people at

the end of their lives reside," Moore said.

She then said Americans shouldn't be alarmed to see people dying a day or two after receiving the COVID vaccination.
