

Highly Cited COVID Doctor Reveals that the Government Is “Scrubbing Unprecedented Numbers of Injection-Related Deaths”

Dr. Peter McCullough, MD, one of the most cited medical doctors on COVID-19, reported that, between December 14 and April 23, there were 3,544 deaths reported to the CDC's Vaccine Adverse Event Reporting System [VAERS], along with 12,619 serious injuries. He said if this were any other vaccine it would have been pulled from the market for safety reasons after 50 unexplained deaths. In early March, the CDC announced that they had reviewed about 1,600 deaths and indicated that not a single death was related to the vaccine! Dr. McCullough said it is impossible to opine that none of the deaths were related to the vaccine without a thorough investigation. Covid injection deaths are undercounted because (1) only 1% to 10% of all vaccine-related deaths are estimated to be reported to VAERS, (2) reporting a death requires a healthcare worker to enter it into the system, (3) and if the death does not occur within the normal 15-minute monitoring period they often go unreported. Most deaths occur within 72 hours of the shot. McCullough also said focusing on sick patients would have had the highest public-health value, instead of lockdowns and masks for contagion control, and vaccines.

The doctor warned against the 'Trusted News Initiative'

introduced on December 10 that is a coalition of all the major media with government stakeholders in vaccination that are preventing any negative information about the Covid shots from getting into the popular media because they are concerned about Americans rejecting them if they were advised of the numbers of related deaths and injuries.

3,544 deaths and 12,619 serious injuries reported between Dec. 14, 2020 and April 23, 2021

One of the world's most prominent medical doctors with expertise in treating COVID-19 has gone on the record with a scathing rebuke of the U.S. government's approach to fighting the virus. He says the government's strategy, carried out in cooperation with the Bill and Melinda Gates Foundation and the United Nations World Health Organization, has resulted in tens of thousands of unnecessary deaths and is now being followed up with thousands more deaths caused by a mass-injection program.

Dr. Peter McCullough, in a 32-minute interview with journalist Alex Newman, said if this were any other vaccine it would have been pulled from the market by now for safety reasons.

McCullough holds the honor of being the most cited medical doctor on COVID-19 treatments at the National Library of Medicine, with more than 600 citations. He has testified before Congress and won numerous awards during his distinguished medical career.

Between Dec. 14 and April 23, there were 3,544 deaths reported to the CDC's Vaccine Adverse Event Reporting System [VAERS], along with 12,619 serious injuries.

One might expect these numbers would trigger an exhaustive investigation from the U.S. Food and Drug Administration. But

the opposite has occurred. According to McCullough, the government has taken what amounts to a passing glance at the alarming numbers and dismissed them with a bare minimum of scrutiny.

“A typical new drug at about five deaths, unexplained deaths, we get a black-box warning, your listeners would see it on TV, saying it may cause death,” McCullough said. “And then at about 50 deaths it’s pulled off the market.”

The U.S. has a precedent for this. In 1976 during the Swine Flu pandemic the U.S. attempted to vaccinate 55 million Americans, but at that point the shot caused about 500 cases of paralysis and 25 deaths.

“The program was killed, at 25 deaths,” McCullough said.

Compare that type of response to the government’s reaction to much higher reported death numbers related to the Moderna and Pfizer shots and the contrast is alarming, McCullough said, especially when the shots have not even been granted full FDA approval and are only being allowed on the market under an Emergency Use Authorization.
