

Hospital Whistleblower Reports that Doctors & Hospitals do not Report Vaccine Injuries & Deaths

written by GEG | September 27, 2021

Hospital Physician's Assistant, Deborah Conrad, revealed that health care providers, including hospitals, have failed to report massive numbers of vaccine injuries to the CDC's Vaccine Adverse Events Reporting System, despite the fact it is required by law. She saw a large increase in pneumonia cases after people started receiving a Covid shot. She also saw increases in heart attacks, strokes, gastro-intestinal bleeding, appendicitis, pancreatitis, and recurrent cancers. Conrad began reporting patient injuries, and it took up much of her time. In less than a month, she had reported 50 vaccine-linked incidents to VAERS, some of which were not her personal patients. When that was discovered, she was ordered to stop reporting on other patients than her own and was told she must support the vaccine effort. CDC data shows that between December 14, 2020 and September 10, 2021, a total of 701,561 adverse events following COVID vaccines, and a total of 14,925 reports of deaths were reported to the Vaccine Adverse Event Reporting System (VAERS). A 2011 study by Harvard Pilgrim Health Care states "fewer than 1% of vaccine adverse events are reported." [That means the official numbers must be multiplied by 99 – and that means 69,454,539 adverse reactions and 1,477,575 deaths (murders). The population culling has begun.] -GEG
