

# Doctors Examined Pfizer, Moderna and AstraZeneca Vaccines and Found Exotic Metals and Parasites

written by GEG | October 15, 2021

Thirty-five groups of doctors, research scientists and lawyers across US, UK, Germany, Austria and Japan examined a thousand vials of Pfizer, Moderna and AstraZeneca 'vaccines' and found hundreds of sharp edged metal pieces in one droplet along with parasite material. When researchers heated the samples while being observed under the microscope, the particles began to move and were in-sync with each other. Sharp metal objects, graphene layers, large rectangular objects that have never seen before, are not biologic and likely are harmful when inside a human body. These doctors are calling for a worldwide halt of Covid injections. -GEG
