

CDC Changes Its Numbers from 2,902,664 Total Deaths in 2020 to to 3,358,814 'Provisional' Deaths

written by GEG | January 18, 2022

According to a screenshot from a CDC page taken on December 30, 2020, there were 2,902,664 deaths for all causes in the US for the entire year of 2020. This number shows there was little increase in deaths from the “pandemic” in 2020. However, that page disappeared from the CDC website. According to a later [CDC report dated April 9, 2021](#), the CDC revised its numbers and reported that there were 3,358,814 deaths in the US in 2020. However, the higher replacement number is a “provisional” number, which is an estimate. There is a difference of 486,430 deaths between the two numbers that were both presented by the CDC, with the higher number being a provisional number.

The author of this article says that the extra numbers were added in 2020 in order to cover up the increase in deaths, more than 400,000, in 2021 after the experimental Covid-19 jabs were introduced.

The CDC also stopped reporting deaths from influenza.

At the end of 2020, we reported how the CDC was caught manipulating the death statistics to make “COVID deaths” appear to be much higher than they actually were.

CDC DATA

TOTAL U.S. DEATHS [ALL CAUSES]:

2017: 2,813,503 (234,000/MO.)

2018: 2,839,206 (237,000/MO.)

2019: 2,855,000 (238,000/MO.)

2020: 2,130,000 (JAN–SEPT)

$2,130,000 + (236,000 \times 3)$ [OCT–DEC]
= 2,838,000 (PROJECTED 2020)

In November of 2020, we published an article with the above chart showing that based on the CDC's own statistics from January through September of 2020, the total projected deaths for the year were on pace to be about the same as the previous three years, 2017 – 2019. See:

Statistics Show that the Number of People who Died in the U.S. in 2020 will be the SAME as Previous Years, in Spite of COVID

When word got out that the flu season seemed to vanish in 2020, the CDC proceeded to stop tracking influenza statistics.

Here is a screenshot from the CDC website of the page that announced this, but I do not believe this page is found on the CDC website anymore:

3. Summary of the Geographic Spread of Influenza

State and territorial health departments report the estimated level of geographic spread of influenza activity in their jurisdictions each week through the **State and Territorial Epidemiologists Report**. This level does not measure the severity of influenza activity; low levels of influenza activity occurring throughout a jurisdiction would result in a classification of “widespread”. Jurisdictions classify geographic spread as follows:

- **No Activity:** No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.
- **Sporadic:** Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.
- **Local:** Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.
- **Regional:** Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.
- **Widespread:** Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state with recent laboratory evidence of influenza in the state.

Due to the ongoing COVID-19 pandemic, this system will suspend data collection for the 2020-21 influenza season. Data from previous seasons are available on FluView Interactive.

See:

In Unprecedented Move CDC Stops Tracking Influenza for 2020-21 Flu Season

On February 3, 2021, we published an article highlighting a study published in the journal *Science, Public Health Policy & the Law* that claimed the CDC violated federal law by inflating COVID-19 fatality statistics.

The study is titled “COVID-19 Data Collection, Comorbidity & Federal Law: A Historical Retrospective.”

In that same article that we published, we published a screenshot of a page that existed on the CDC website on December 30, 2020 that showed the total deaths in the U.S. from all causes as of December 30, 2020, as being 2,902,664 deaths. See:

Study: CDC Broke Federal Law by Manipulating COVID Death Statistics

NOTICE TO USERS: The data file for deaths by sex and age at the state level has been updated on September 2, 2020 to include the following age groups in addition to the age groups that are routinely included: 0-17, 18-29, 30-49, and 50-64. The new age groups are consistent with categories used across CDC COVID-19 surveillance pages. When analyzing the file, the user should make sure to select only the desired age groups. Summing across all age categories provided will result in double counting deaths from certain age groups.

Data on deaths involving COVID-19 among ages 0-18 are available here: [Click here to download](#).

Table 1. Deaths involving coronavirus disease 2019 (COVID-19), pneumonia, and influenza reported to NCHS by sex and age group. United States. Week ending 2/1/2020 to 12/26/2020.*

Updated December 30, 2020

Sex	Age group	All Deaths involving COVID-19 (U07.1) ¹	Deaths from All Causes	Deaths involving Pneumonia, with or without COVID-19, excluding Influenza deaths (J12.0-J18.9) ²	Deaths involving COVID-19 and Pneumonia, excluding Influenza (U07.1 and J12.0-J18.9) ²	All Deaths involving Influenza, with or without COVID-19 or Pneumonia (J09-J11) ³	Deaths involving Pneumonia, Influenza, or COVID-19 (U07.1 or J09-J18.9) ⁴	Population ⁵
Total								
	All ages	301,679	2,902,664	285,361	138,917	6,946	453,994	328,239,523
	Under 1 year	32	16,076	155	6	16	197	3,783,052
	1-4 years	19	2,969	96	3	43	155	15,793,631
	5-14 years	51	4,810	131	9	53	226	40,994,163
	15-24 years	483	30,975	627	172	55	989	42,687,510
	25-34	2,087	63,554	2,278	931	156	3,574	45,940,321

Just after the first of the year in 2021, however, this page disappeared from the CDC website, and an entirely new section was put up on the CDC's website that tracked deaths, and the total deaths for 2020 were revised to be 3,389,094, a difference of 486,430 deaths.

Now, one year later, it appears that those additional deaths attributed to 2020 were basically being pre-added to cover up the deaths that were going to be caused by the experimental COVID-19 "vaccines" for 2021.
