

What Most of Us Do Not Want to Know about Cell-Phone Technology

written by GEG | February 17, 2022

Here are the hard questions this article answers. You will not like some of the answers.

What is wireless technology?

.

Wireless technology is any means of sending information or energy through space without wires. It includes:

.

- satellites, radar, radio, television, cell towers, cell phones, cordless phones, microwave ovens
 - smart meters, WiFi, Bluetooth, fitness trackers, smartwatches, baby monitors
 - wireless keyboards, mice, printers, headphones and speakers, wireless security systems, wireless car keys, wireless garage door openers, wireless battery chargers, remote controls, wireless microphones
 - RFID chips in credit cards and driver's licenses, radio collars and chips in wildlife, cattle and pets, chips in home appliances
 - wireless hearing aids, assistive listening devices, medical alert pendants, chips in medical implants, wireless pacemakers
 - autonomous vehicles, drones, and robots
 - numerous other radio-enabled devices that are proliferating in today's world
- Every one of these devices, without exception, emits radiation.

.

What's wrong with wireless technology?

.

By substituting radiation for wires, we are swimming in an ocean of artificial electromagnetic fields that are interfering with life itself. We are in effect electrocuting ourselves, our children, our pets, the insects, birds, animals, trees, and plants around us, and all living creation. We are killing our planet.

.

This is about long-term exposure, right? Cancer takes years to develop?

.

No. The effects are rapid. Heart rate changes immediately. Blood sugar rises in minutes. Having wireless devices in your house interferes with your sleep and your memory. Using a cell phone destroys brain cells in minutes to hours, and can cause a stroke or a heart attack. Studies show that even cancer can develop within months of first exposure. When a cell tower is turned on, birds leave the area immediately. Insects disappear. Even slugs and snails vanish. Most of this takes no time at all.

.

What types of radiation are used in wireless technology?

.

Studies show that even cancer can develop within months of first exposure. When a cell tower is turned on, birds leave the area immediately. Insects disappear. Even slugs and snails vanish. Most of this takes no time at all.

.

What types of radiation are in wireless technology?

.

All frequencies of radio waves, microwaves, infrared radiation, visible light, lasers, sound waves, even nuclear radiation. Most home devices use microwaves.

.

Isn't microwave radiation natural? Don't microwaves come from the sun and stars?

.

Almost all the radiation we receive from the universe is the light and heat from the sun, not microwave radiation. The microwave radiation a person receives from an average cell tower is *millions* of times stronger than all the microwave radiation from the sun and stars. The microwave radiation a person's brain receives from their cell phone is *billions* of times stronger than the microwave radiation from the sun and stars. And at any particular frequency it is trillions of times stronger than the microwave radiation he or she receives from the sun and stars at that frequency. And the faint microwaves from the sun and stars are not pulsed and modulated. It is the pulsations and modulation that cause much of the harm.
