

# Wall Street Insider Edward Dowd and Naomi Wolf Discuss New COVID Vaccine Data

written by GEG | April 19, 2022

Wall Street insider Edward Dowd explains the 'pump and dump' scheme for Pfizer stock and Naomi Wolf drops multiple bombshells based on the discoveries by teams of researchers studying FDA documents about Pfizer's COVID vaccines that were recently published. She said that Moderna injected 100 micrograms in the first doses of their "vaccines", which is more than triple the dose of Pfizer's highest dose shot.

Summary by JW Williams

Journalist Naomi Wolf reports on an organized team of scientists, doctors, lawyers and researchers studying COVID-19 vaccine data, and she revealed that they discovered Pfizer has three different vaccine doses at 3, 10 and 30 micrograms of active ingredients that were given to people based on their age, rather than their size and weight. The ingredients believed to cause harm include lipid nanoparticles, mRNA, and spike protein. She said that the CDC, despite their claim that the spike protein does not leave the injection site, knew that within 48 hours, spike proteins enter the liver, spleen,

adrenals and ovaries.

.  
She said that Moderna more than tripled the dose to 100 micrograms in the first dose of vaccines that it released, but none of the recipients were told that they received high-dose vaccines that she said caused many adverse reactions. Pfizer dropped its 100 microgram dose due to “reactogenicity”.

.  
Wolf said that Pfizer proudly told the FDA that they were hiring 2,400 full-time employees to process the paperwork for the flood of adverse events/ injuries that they had already received by April 2021 and that they expected to receive in the following months.

.  
In May 2021, the FDA and Pfizer would have known that the mRNA vaccines were causing myocarditis in teenagers because there was a peer-reviewed article about it in a medical journal and **the study** had already gone on for several months. Thirty five teens had heart damage within 7 days of taking the mRNA injection. Nevertheless, the FDA issued Emergency Use Authorization (EUA) in June 2021 and hundreds of thousands of teens were injected between June 2021 and August 2021 when the FDA issued a press release admitting there were signs that it causes myocarditis in teens.

.  
Dowd commented that because Pfizer committed fraud because it continued to push their COVID injection, knowing that it was hurting people and it didn’t work.

.  
Wolf said that the COVID pandemic is not over because from the start, six doses of COVID vaccines were planned.
