

SmartPhone Tech to Be “Built Directly into Our Bodies” Says World Economic Forum

written by GEG | June 12, 2022

Nokia CEO Pekka Lundmark said, “...I was talking about 6G earlier, which [will happen] around 2030. I would say that by then, definitely, the smartphone as we know it today will not be the most common interface. Many of these things will be built directly into our bodies.”
