

# Justin Bieber Suffers from Facial Paralysis Months after His Wife Had a Stroke

written by GEG | June 12, 2022

Justin Bieber, 28, revealed that he has a type of facial paralysis, Ramsay Hunt Syndrome (RHS), that affects one side of his face. The Mayo clinic reported that the RHS is more common in people over the age of 60 and is triggered by the same virus that causes chicken pox and shingles. Under normal conditions, RHS affects 5 people in 100,000, but the case number increases to a rate of 338 cases per 100,000 people after COVID vaccination, according to researcher Steve Kirsch. He said that it is 99% likely that Justin's RHS was caused by the vaccine, and only 1% chance that he got "unlucky." In March, Bieber's 25-year old wife, Hailey, suffered a small stroke caused by a blood clot in the brain. Strokes are rare in young people. Weeks prior to her stroke, Justin had reportedly been diagnosed with COVID and canceled several shows, but was said to have recovered. Neither Justin nor Hailey has revealed whether they have received COVID injections and their status is unknown.

## Executive summary

The VAERS data shows that Ramsay Hunt Syndrome (RHS) is 160 times more likely after a COVID vaccination than for all the other vaccines combined in any given year. And if you exclude the anthrax vaccine from that comparison, the likelihood is simply too high to

calculate (0 cases in 32 years).

So the COVID vaccine should definitely be considered as a possible cause for this rare disease.

I show below that the estimated rate of RHS after COVID vaccination is 338 cases per 100,000. The **medical literature says it occurs naturally in 5 cases per 100,000**. Therefore, it is 99% likely that Justin's RHS was caused by the vaccine, and only 1% chance that he got "unlucky."

Sadly, it's unlikely Bieber's doctors will ever acknowledge that so it's unlikely he'll get the care he needs (treat both **the RHS and the vaccine injury**). He'll simply assume he is just unlucky.

The mainstream press isn't doing its job if they don't report this (which they won't).

## Introduction

I was just finishing **a slide in my Elephant deck scolding Jonathan Jarry for ridiculing my comments about how shingles is exacerbated by the COVID vaccines** (search for Jarry in the deck).

I take a break and I check my email and it is lit up with messages from my followers about **Justin Bieber per this story**:

**Justin Bieber says he has facial paralysis due to Ramsay Hunt syndrome**

 **By Lisa Respers France, CNN**  
🕒 Updated 6:58 PM ET, Fri June 10, 2022

Here's one of the messages:

*Seems eerily similar to a vaccine related shingles activation, amongst other things. All these odd ones are popping up in what seemingly is a more than normal fashion, by a fair bit. We even have new problems, like "Sudden Adult Death Syndrome" which I am reading about all of the sudden. Hmm...*

## This is the bad news for Justin Bieber

Compared with Bell's palsy (facial paralysis without rash), patients with Ramsay Hunt syndrome often have more severe paralysis at onset and are less likely to recover completely.

## Bieber's wife was also likely vaccine injured

For example, see this tweet about his 26 year-old wife who had a mini-stroke after she was vaccinated. Lot of young people getting strokes nowadays... the one thing they have in common: they've all been vaccinated.

Here's another article stating she revived the vaccine and they believe it's what caused the blood clot. This woman is 26 years old. That is EXTREMELY uncommon and has increased 1000 fold post vaccine. It's just the facts. Here's another article for you

What does VAERS say about this?

First, here's what the slide I wrote says about shingles says:

*But according to Jonathan Jarry, the "Pseudoscience Buster" at McGill, I am a misinformation spreader for pointing out the high rate of shingles recurrence as acknowledged in the peer-reviewed literature.*

*In my defense, according to VAERS, there were 54 shingles reports following the COVID vaccines in the US and associated with death. There were 0 cases in 2020 for all vaccines combined. 54/0 is infinity which is "off the charts" for most charts I'm aware of.*

But Bieber was diagnosed with RHS.

As all misinformation spreaders know, the MedDRA search term to use for RHS is the more

cool-sounding "Herpes zoster oticus.
