

Motive Behind Vanderbilt Pediatric Transgender Clinic Exposed as a 'Big Money Maker'

written by GEG | September 22, 2022

Journalist Matt Walsh reported that Vanderbilt University in Tennessee got into the gender transition game, which includes hormone drugs and transition surgeries for minor children that permanently disfigure their bodies and cause sterility, in large part because it is very financially profitable. University authorities then threatened any staff members who objected, and enlisted a gang of trans activists to act as surveillance in order to force compliance.

Vanderbilt University Medical Center (VUMC) has deleted the website of their Transgender Clinic after journalist Matt Walsh detailed a doctor's promotion of transgender surgeries as a "big money maker" for the institution.

Videos obtained by Walsh also show apparent threats made against VUMC medical professionals who objected to the procedures, even for religious reasons.

Vanderbilt opened its trans clinic in 2018. During a lecture the same year, Dr. Shayne Taylor explained how she convinced Nashville to get into the gender transition game. She emphasized that it's a "big money maker," especially because the surgeries require a lot of "follow ups" pic.twitter.com/zedM7HBCBe
