

The [Pharmaceutical CIA: How Sewage and Pollution Became [Treatable Diseases

written by GEG | December 21, 2017

Waste from industrialized pig farms are kept in open-air pits called lagoons and farmers spray [it on their crops as fertilizer. Hogs produce ten times the fecal waste by weight as humans. Industrialized pig farms should have their own sewage treatment plants, but the cost would be so high that pork would be priced out of the market. The CDC has become a front for the pharmaceutical cartel and blames filth-related diseases on 'newly discovered viruses', and then invents toxic vaccines supposedly to combat the viruses.
